General Description

1. General Article

Application Range

These specifications refer to the "Multilayer Ceramic Capacitors" mainly

used in various every products such as home appliances, audio/visual equipment, communication devices, and Etc.

*Caution : Industrial equipment / For the high reliability equipment / LED equipment / Etc.

Please contact sales representatives or product engineers before using the products.

(For details, please reference "Note" page)

2. General Code

1) Multilayer Ceramic Capacitor (Commercial Grade)

2) Size Code : This is expressed in tens of a millimeter.

The first two digits are the length, The last two digits are width.

3) Temperature Coefficient Code

Classification	Code	Temperature Range	Capacitance Tolerance
Class II	X7R	-55 to +125°C	± 15 %

4) Capacitance Tolerance Code

The nominal Capacitance Value in pF is expressed by three digit numbers.

The first two digits represents significant figures and the last digit denotes the number of zero

ex) 104 = 100000 pF / R denotes decimal / 8R2 = 8.2 pF

5) Capacitance Tolerance Code

Code	Tolerance
B	± 0.1 pF
C	± 0.25 pF
D	± 0.5 pF
F	± 1.0 %

Caution

► Storage Condition

When solderability is considered, capacitor are recommended to be used in 12 months.
 MLCC should be stored at 5~40℃ with a relative humidity of 20~70%
 High humidity can reduce solderability due to oxidation.
 Use the product within 6 months of the outgoing delivery date, and check the packaging if more than 6 months have passed.
 It's recommended to use within 1 year to avoid solderability issues from long-term storage.
 If over 1 year, verify solderability before use.

► The Regulation of Environmental Pollution Materials

Never use materials mentioned below in MLCC products regulated this document.
 Pb, Cd, Hg, Cr+6, PBB(Polybrominated biphenyl), PBDE(Polybrominated diphenyl ethers), asbestos

► Reflow Soldering

1. The sudden temperature change easily causes mechanical damages to ceramic components. Therefore, the preheating procedures should be required for the soldering of ceramic components.
2. Please refer to the recommended soldering profiles as shown in figures, and keep the temperature difference(ΔT) within the range recommended in Table 1.

Table 1

Size code (EIA Code)	Temperature Difference
0603, 1005, 1608, 2012, 3216	$\Delta T \leq 150^{\circ}\text{C}$

► Lifetime

As a general MLCC from Samhwa Capacitor, the typical service life is 10 years.

When the product's operating conditions within a set are "Temperature 20°C lower than the maximum operating temperature and rated voltage at 80% or less," the product is designed to have an internal service life of 10 years or more.

※ The lifetime is provided for reference only and should be used as a guideline during design and usage (it does not guarantee the product's lifetime).

Note

(1) 'Aging'/'De-aging' behavior of high dielectric constant type MLCCs

(Typically represented by X7R temperature characteristic of which main composition is BaTiO₃)

'Aging' / 'De-aging' Behavior of high dielectric MLCCs Please note that high dielectric type dielectric ceramic capacitors have a "normal" 'aging' behavior / characteristic, that is; their capacitance value decreases with time from its value when it was first manufactured. From that date, the capacitance value begins to decrease at a logarithmic rate defined by :

$$C_t = C_{24} (1 - k \log_{10} t)$$

where,

C_t : Capacitance value, t hours after the start of 'aging

C_{24} : Capacitance value, 24 hours after its manufacture

k : Aging constant (capacitance decrease per decade-hour)

t : time, in hours, from the start of 'aging'

The capacitance value can be restored (also known as 'de-aged') by exposing the component to elevated temperatures approaching its curie temperature (approximately 120°C). This 'de-aging' can occur during the component's solder-assembly onto the PCB, during life or temperature cycle testing, or by baking at 150°C for about 1 hour.

(2) Caution of Application

Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- (a) Aircraft equipment
(b) Aerospace equipment
(c) Undersea equipment
(d) Power plant equipment
- (e) Medical equipment
(f) Transportation equipment (vehicles, trains, ships, etc.)
- (g) Traffic signal equipment
(h) Disaster prevention / crime prevention equipment
- (i) Industrial equipment (Conveyors, Robot equipment, etc)
(j) Led equipment
- (k) Application of similar complexity and/or reliability requirements to the applications listed above
