Subminiature D Type Connectors

Type B, Straight, Solder

Assembly

ECN0695-P

- Screw or rivet mounting is not necessary on double-sided PC boards. After flow soldering, the plug connector is permanently fixed in the PC board by the pre-mating grounding soldering pins (retention force > 100 N) and has a reliable ground connection.
- New: Snap-in lugs on the four outer ground soldering pins additionally fix the plug connector in the circuit board.

  Advantage: The plug connectors always stand upright on the circuit board after being snapped in (even after the soldering process).
