

Precision Micropower Shunt Voltage Reference

Features

- Small SOT-23 package
- No output capacitor required
- Tolerates capacitive loads
- LM4040 is available in fixed reverse breakdown voltages of 2.048V, 2.500V, 3.000V, 3.300V 4.096V, 5.000V, 8.192V and 10V.
- LM4041 is available with a fixed 1.225V or an adjustable reverse break- down voltage.

Key Specifications

- Tight output tolerances and low temperature coefficient
 - Maximum 0.1%, 100ppm/°C – A Grade
 - Maximum 0.2%, 100ppm/°C – B Grade
 - Maximum 0.5%, 100ppm/°C – C Grade
 - Maximum 1.0%, 150ppm/°C – D Grade
 - Maximum 2.0%, 150ppm/°C – E Grade
- Low output noise (10Hz to 100Hz)
 - LM4040 35uVRMS (typ)
 - LM4041 20uVRMS (typ)
- Wide operating current range
 - LM4040 60 uA to 15mA
 - LM4041 60 uA to 12mA
- Industrial temperature range: -40°C to +85°C
- Low temperature coefficient: 100ppm/ °C (max)

Applications

- Battery-Powered Equipment
- Data Acquisition Systems
- Instrumentation
- Process Control
- Energy Management
- Product Testing
- Automotive Electronics
- Precision Audio Components

General Description

Ideal for space critical applications, the LM4040 and LM4041 precision voltage references are available in the subminiature (3mm × 1.3mm) SOT-23 surface-mount package.

The LM4040 is available in fixed reverse breakdown voltages of 2.048V, 2.500V, 3.000V, 3.300V, 4.096V, 5.000V, 8.192V and 10V. The LM4041 is available with a fixed 1.225V or an adjustable reverse breakdown voltage.

The minimum operating current ranges from 60µA for the LM4041-1.2 to 74µA for the LM4040-5.0. LM4040 versions have a maximum operating current of 15mA. LM4041 versions have a maximum operating current of 12mA.

The LM4040 and LM4041 utilizes zener-zap reverse breakdown voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than ±0.1% (A grade) at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

Functional Diagram

LM4040, LM4041 Fixed

LM4041 Adjustable

Typical Applications

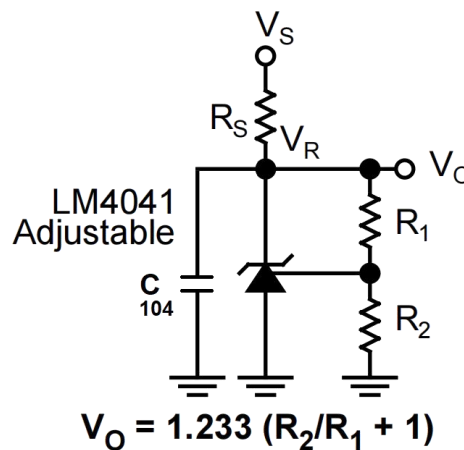

Figure 1. LM4040,LM4041 Fixed Shunt Regulator Application

$$V_O = 1.233 (R_2/R_1 + 1)$$

Figure 2. LM4041 Adjustable Shunt Regulator Application

ABSOLUTE MAXIMUM RATINGS

Parameter	Value	Unit
Reverse Current	20	mA
Forward Current	10	mA
Maximum Output Voltage		
LM4041-Adjustable	15	V
Power Dissipation at TA = 25°C (Note 2)	306	mW
Storage Temperature	-65 to +150	°C
Lead Temperature (TL) (Soldering, 10 seconds)	260	°C
ESD Susceptibility		
Human Body Model (Note 3)	2	kV
Machine Model (Note 3)	200	V

Note: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not ensured.

Operating Ratings (Notes 1 and 2)

Parameter	Value
Temperature Range($T_{MIN} \leq T_A \leq T_{MAX}$)	$-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$
Reverse Current	
LM4040-2.0	60uA to 15mA
LM4040-2.5	60uA to 15mA
LM4040-3.0	62uA to 15mA
LM4040-3.3	62uA to 15mA
LM4040-4.1	68uA to 15mA
LM4040-5.0	74uA to 15mA
LM4040-8.2	91uA to 15mA
LM4040-10	100uA to 15mA
LM4041-1.2	60uA to 12mA
LM4041-ADJ	60uA to 12mA
Output Voltage Range	
LM4041-ADJ	1.24V to 10V

LM4040-2.0 Electrical Characteristics

Boldface limits apply for $T_A = T_J = T_{MIN}$ to T_{MAX} ; all other limits $T_A = T_J = 25^\circ\text{C}$. The grades A, B, C, and D designate initial Reverse Breakdown Voltage tolerance of $\pm 0.1\%$, $\pm 0.2\%$, $\pm 0.5\%$, and $\pm 1.0\%$ respectively.

LM4040 and LM4041 Electrical Characteristic Notes

1. Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. For guaranteed specification and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
2. The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{JMAX} (maximum junction temperature), θ_{JA} (junction to ambient thermal resistance), and T_A (ambient temperature). The maximum allowable power dissipation at any temperature is $PD_{MAX} = (T_{JMAX} - T_A)/\theta_{JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower. For the LM4040 and LM4041, $T_{JMAX} = 125^\circ\text{C}$, and the typical thermal resistance (θ_{JA}), when board mounted, is $326^\circ\text{C}/\text{W}$ for the SOT-23 package.
3. The human body model is a 100pF capacitor discharged through a 1.5k Ω resistor into each pin. The machine model is a 200pF capacitor discharged directly into each pin.
4. Typicals are at $T_J = 25^\circ\text{C}$ and represent most likely parametric norm.
5. Limits are 100% production tested at 25°C . Limits over temperature are guaranteed through correlation using Statistical Quality Control (SQL) methods.
6. The boldface (over temperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance $[(\Delta V_R/\Delta T)(65^\circ\text{C})(V_R)]$. $\Delta V_R/\Delta T$ is the V_R temperature coefficient, 65°C is the temperature range from -40°C to the reference point of 25°C , and V_R is the reverse breakdown voltage. The total over temperature tolerance for the different grades follows:
 - A. grade: $\pm 0.75\% = \pm 0.1\%$ 100ppm/ $^\circ\text{C}$ 65°C
 - B. grade: $\pm 0.85\% = \pm 0.2\%$ 100ppm/ $^\circ\text{C}$ 65°C
 - C. grade: $\pm 1.15\% = \pm 0.5\%$ 100ppm/ $^\circ\text{C}$ 65°C
 - D. grade: $\pm 1.98\% = \pm 1.0\%$ 150ppm/ $^\circ\text{C}$ 65°C
 - E. grade: $\pm 2.98\% = \pm 2.0\%$ 150ppm/ $^\circ\text{C}$ 65°C
 - F. Therefore, as an example: The A-grade LM4040-2.5 has an over temperature Reverse Breakdown Voltage tolerance of $\pm 2.5 \times 0.75\% = \pm 19\text{mV}$.
7. When $V_{OUT} \leq 1.6\text{V}$, the LM4041-ADJ must operate at reduced I_R . This is caused by the series resistance of the die attach between the die (-) output and the package (-) output pin. See the Output Saturation curve in the Typical Performance Characteristics section.
8. Reference voltage and temperature coefficient will change with output voltage. See Typical Performance Characteristics curves.

Applications Information

The LM4040 and LM4041 have been designed for stable operation without the need of an external capacitor connected between the (+) and (–) pins. If a bypass capacitor is used, the references remain stable.

Schottky Diode

LM4040-x.x and LM4041-1.2 in the SOT-23 package have a parasitic Schottky diode between pin 2 (–) and pin 3 (die attach interface connect). Pin 3 of the SOT-23 package must float or be connected to pin 1. LM4041-ADJs use pin 3 as the (–) output.

Conventional Shunt Regulator

In a conventional shunt regulator application (see Figure 1), an external series resistor (R_S) is connected between the supply voltage and the LM4040-x.x or LM4041-1.2 reference. R_S determines the current that flows through the load (I_L) and the reference (I_Q). Since load current and supply voltage may vary, R_S should be small enough to supply at least the minimum acceptable I_Q to the reference even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and I_L is at its minimum, R_S should be large enough so that the current flowing through the LM4040-x.x is less than 15mA, and the current flowing through the LM4041-1.2 or LM4041-ADJ is less than 12mA.

R_S is determined by the supply voltage (V_S), the load and operating current, (I_L and I_Q), and the reference's reverse breakdown voltage (V_R).

$$R_S = (V_S - V_R) / (I_L + I_Q)$$

Adjustable Regulator

The LM4041-ADJ's output voltage can be adjusted to any value in the range of 1.24V through 10V. It is a function of the internal reference voltage (V_{REF}) and the ratio of the external feedback resistors as shown in Figure 2. The output is found using the equation

$$(1) \quad V_O = V_{REF}' [(R_2/R_1) + 1]$$

where V_O is the desired output voltage. The actual value of the internal V_{REF} is a function of V_O . The "corrected" V_{REF}' is determined by

$$(2) \quad V_{REF}' = V_O (\Delta V_{REF} / \Delta V_O) + V_Y$$

where V_O is the desired output voltage. $\Delta V_{REF} / \Delta V_O$ is found in the Electrical Characteristics and is typically -1.3mV/V and V_Y is equal to 1.233V. Replace the value of V_{REF}' in equation (1) with the value found using equation (2).

Note that actual output voltage can deviate from that predicted using the typical $\Delta V_{REF} / \Delta V_O$ in equation (2); for C- grade parts, the worst-case $\Delta V_{REF} / \Delta V_O$ is -2.5mV/V and $V_Y = 1.248\text{V}$.

The following example shows the difference in output voltage resulting from the typical and worst case values of $\Delta V_{REF} / \Delta V_O$:

Let $V_O = +9\text{V}$. Using the typical values of $\Delta V_{REF} / \Delta V_O$, V_{REF} is 1.223V. Choosing a value of $R_1 = 10\text{k}\Omega$, $R_2 = 63.272\text{k}\Omega$. Using the worst case $\Delta V_{REF} / \Delta V_O$ for the C-grade and D-grade parts, the output voltage is actually 8.965V and 8.946V respectively. This results in possible errors as large as 0.39% for the C-grade parts and 0.59% for the D-grade parts. Once again, resistor values found using the typical value of $\Delta V_{REF} / \Delta V_O$ will work in most cases, requiring no further adjustment.

Revision History

REVISION NUMBER	DATE	REVISION	PAGE
V1.0	2014-3	New	1-19
V1.1	2017-9	Add annotation for Maximum Ratings.	3
V1.2	2024-11	The LM4040 model has increased by 2.048V, 3.000V, 8.192V, and 10V. Update Lead Temperature	1-14
V1.3	2025-12	Update important statements	26
V1.4	2026-3	Update General Description, Added capacitor 104 to the application circuit diagram	3, 4, 21-23

IMPORTANT STATEMENT:

Huaguan Semiconductor reserves the right to change products and services offered without prior notice. Customers should obtain the latest relevant information before placing orders and verify that such information is current and complete. Huaguan Semiconductor assumes no responsibility or liability for altered documents.

Customers are responsible for complying with safety standards and implementing safety measures when using Huaguan Semiconductor products in system design and end-product manufacturing. You assume full responsibility for: selecting the appropriate Huaguan Semiconductor products for your application; designing, validating, and testing your application; and ensuring that your application complies with applicable standards and all other safety, security, or other requirements. This is to prevent potential risks that may lead to personal injury or property damage.

Huaguan Semiconductor products are not approved for use in life support, military, aerospace, or other high-risk applications. Huaguan products are neither intended nor warranted for use in such systems or equipment. Any failure or malfunction may lead to personal injury or severe property damage. Such applications are deemed "Unsafe Use." Unsafe Use includes, but is not limited to: surgical and medical equipment, nuclear energy control equipment, aircraft or spacecraft instruments, control or operation of vehicle power, braking, or safety systems, traffic signal instruments, all types of safety devices, and any other applications intended to support or sustain life. Huaguan Semiconductor shall not be liable for consequences resulting from Unsafe Use in these fields. Users must independently evaluate and assume all risks. Any issues, liabilities, or losses arising from the use of products beyond their approved applications shall be solely borne by the user. Users may not claim any compensation from Huaguan Semiconductor based on these terms. If any third party claims against Huaguan Semiconductor due to such Unsafe Use, the user shall compensate Huaguan Semiconductor for all resulting damages and liabilities.

Huaguan Semiconductor provides technical and reliability data (including datasheets), design resources (including reference designs), application or other design advice, web tools, safety information, and other resources for its semiconductor products. However, no guarantee is made that these resources are free from defects, and no express or implied warranties are provided. The use of testing and other quality control techniques is limited to Huaguan Semiconductor's quality assurance scope. Not all parameters of each device are tested.

Huaguan Semiconductor's documentation authorizes you to use these resources only for developing applications related to the products described herein. You are not granted rights to any other intellectual property of Huaguan Semiconductor or any third party. Any other reproduction or display of these resources is strictly prohibited. You shall fully indemnify Huaguan Semiconductor and its agents against any claims, damages, costs, losses, and liabilities arising from your use of these resources. Huaguan Semiconductor shall not be held responsible.
