Characteristic	Test method and description
High Temperature Storage	The specimen shall be subjected to 125 °C for 1000 hours in a thermostatic bath without load and then stored at room temperature and humidity for 1 to 2 hours. The change of varistor voltage shall be within 10%.
Temperature Cycle	The temperature cycle of specified temperature shall be repeated five times and then stored at room temperature and humidity for one two hours. The change of varistor voltage shall be within 10%and mechanical damage shall be examined.
High Temperature Load	After being continuously applied the maximum allowable voltage at 125 °C for 1000hours, the specimen shall be stored at room temperature and humidity for one or hours, the change of varistor voltage
Damp Heat Load/Humidity Load	The specimen should be subjected to 40°C ,90 to 95%RH environment, and the maximum allowable voltage applied for 1000 hours, then stored at room temperature and humidity for one or two hours. The change of varistor voltage shall be within 10%
Low Temperature Storage	The specimen should be subjected to -40 °C , without load for 1000 hours and then stored at room temperature for one two hours. The change of varistor voltage shall be within 10%.
