## 23.8 Transmit sequence

Before the RADIO is able to transmit a packet, it must first ramp-up in TX mode.

See TXRU in [Figure 34: Radio states](#) on page 209 and [Figure 35: Transmit sequence](#) on page 210.

A TXRU ramp-up sequence is initiated when the TXEN task is triggered. After the radio has successfully ramped up it will generate the READY event indicating that a packet transmission can be initiate. A packet transmission is initiated by triggering the START task. As illustrated in [Figure 34: Radio states](#) on page 209 the START task can first be triggered after the RADIO has entered into the TXIDLE state.

[Figure 35: Transmit sequence](#) on page 210 illustrates a single packet transmission where the CPU manually triggers the different tasks needed to control the flow of the RADIO, i.e. no shortcuts are used. If shortcuts are not used, a certain amount of delay caused by CPU execution is expected between READY and START, and between END and DISABLE. As illustrated in [Figure 35: Transmit sequence](#) on page 210

the RADIO will by default transmit '1's between READY and START, and between END and DISABLED. What is transmitted can be programmed through the DTX field in the MODECNF0 register.

**Figure 35: Transmit sequence**

A slightly modified version of the transmit sequence from [Figure 35: Transmit sequence](#) on page 210 is illustrated in [Figure 36: Transmit sequence using shortcuts to avoid delays](#) on page 210 where the RADIO is configured to use shortcuts between READY and START, and between END and DISABLE, which means that no delay is introduced.

**Figure 36: Transmit sequence using shortcuts to avoid delays**

The RADIO is able to send multiple packets one after the other without having to disable and re-enable the RADIO between packets, this is illustrated in [Figure 37: Transmission of multiple packets](#) on page 211.

**Figure 37: Transmission of multiple packets**

## 23.9 Receive sequence

Before the RADIO is able to receive a packet, it must first ramp up in RX mode

See RXRU in [Figure 34: Radio states](#) on page 209 and [Figure 38: Receive sequence](#) on page 211.

An RXRU ramp-up sequence is initiated when the RXEN task is triggered. After the radio has successfully ramped up it will generate the READY event indicating that a packet reception can be initiated. A packet reception is initiated by triggering the START task. As illustrated in [Figure 34: Radio states](#) on page 209 the START task can, first be triggered after the RADIO has entered into the RXIDLE state.

[Figure 38: Receive sequence](#) on page 211 illustrates a single packet reception where the CPU manually triggers the different tasks needed to control the flow of the RADIO, i.e. no shortcuts are used. If shortcuts are not used, a certain amount of delay, caused by CPU execution, is expected between READY and START, and between END and DISABLE. As illustrated [Figure 38: Receive sequence](#) on page 211 the RADIO will be listening and possibly receiving undefined data, illustrated with an 'X', from START and until a packet with valid preamble (P) is received.

**Figure 38: Receive sequence**

A slightly modified version of the receive sequence from [Figure 38: Receive sequence](#) on page 211 is illustrated in [Figure 39: Receive sequence using shortcuts to avoid delays](#) on page 212 where the RADIO is configured to use shortcuts between READY and START, and between END and DISABLE, which means that no delay is introduced.

**Figure 39: Receive sequence using shortcuts to avoid delays**

The RADIO is able to receive multiple packets one after the other without having to disable and re-enable the RADIO between packets, this is illustrated [Figure 40: Reception of multiple packets](#) on page 212.

**Figure 40: Reception of multiple packets**

## 23.10 Received Signal Strength Indicator (RSSI)

The radio implements a mechanism for measuring the power in the received radio signal. This feature is called Received Signal Strength Indicator (RSSI).

Sampling of the received signal strength is started by using the RSSISTART task. The sample can be read from the RSSISAMPLE register.

The sample period of the RSSI is defined by  $RSSI_{PERIOD}$ , see the device product specification for details. The RSSI sample will hold the average received signal strength during this sample period.

For the RSSI sample to be valid the radio has to be enabled in receive mode (RXEN task) and the reception has to be started (READY event followed by START task).

## 23.11 Interframe spacing

Interframe spacing is the time interval between two consecutive packets.

It is defined as the time, in micro seconds, from the end of the last bit of the previous packet received and to the start of the first bit of the subsequent packet that is transmitted. The RADIO is able to enforce this

interval as specified in the TIFS register as long as TIFS is not specified to be shorter than the RADIO's turn-around time, i.e. the time needed to switch off the receiver, and switch back on the transmitter.

TIFS is only enforced if END\_DISABLE and DISABLED\_TXEN or END\_DISABLE and DISABLED\_RXEN shortcuts are enabled. TIFS is only qualified for use in BLE\_1MBIT mode, and default ramp-up mode.

## 23.12 Device address match

The device address match feature is tailored for address white listing in a Bluetooth Smart and similar implementations.

This feature enables on-the-fly device address matching while receiving a packet on air. This feature only works in receive mode and as long as RADIO is configured for little endian, see PCNF1.ENDIAN.

The Device Address match unit assumes that the 48 first bits of the payload is the device address and that bit number 6 in S0 is the TxAdd bit. See the Bluetooth Core Specification for more information about device addresses, TxAdd and whitelisting.

The RADIO is able to listen for eight different device addresses at the same time. These addresses are specified in a DAB/DAP register pair, one pair per address, in addition to a TxAdd bit configured in the DACNF register. The DAB register specifies the 32 least significant bits of the device address, while the DAP register specifies the 16 most significant bits of the device address.

Each of the device addresses can be individually included or excluded from the matching mechanism. This is configured in the DACNF register.

## 23.13 Bit counter

The RADIO implements a simple counter that can be configured to generate an event after a specific number of bits have been transmitted or received.

By using shortcuts, this counter can be started from different events generated by the RADIO and hence count relative to these.

The bit counter is started by triggering the BCSTART task, and stopped by triggering the BCSTOP task. A BCMATCH event will be generated when the bit counter has counted the number of bits specified in the BCC register. The bit counter will continue to count bits until the DISABLED event is generated or until the BCSTOP task is triggered. The CPU can therefore, after a BCMATCH event, reconfigure the BCC value for new BCMATCH events within the same packet.

The bit counter can only be started after the RADIO has received the ADDRESS event.

The bit counter will stop and reset on BCSTOP, STOP, END and DISABLE tasks.

The figure below illustrates how the bit counter can be used to generate a BCMATCH event in the beginning of the packet payload, and again generate a second BCMATCH event after sending 2 bytes (16 bits) of the payload.

Figure 41: Bit counter example

## 23.14 Registers

Table 40: Instances

| Base address | Peripheral | Instance | Description   | Configuration |
|--------------|------------|----------|---------------|---------------|
| 0x40001000   | RADIO      | RADIO    | 2.4 GHz radio |               |

Table 41: Register Overview

| Register        | Offset | Description                                                               |
|-----------------|--------|---------------------------------------------------------------------------|
| TASKS_TXEN      | 0x000  | Enable RADIO in TX mode                                                   |
| TASKS_RXEN      | 0x004  | Enable RADIO in RX mode                                                   |
| TASKS_START     | 0x008  | Start RADIO                                                               |
| TASKS_STOP      | 0x00C  | Stop RADIO                                                                |
| TASKS_DISABLE   | 0x010  | Disable RADIO                                                             |
| TASKS_RSSISTART | 0x014  | Start the RSSI and take one single sample of the receive signal strength. |
| TASKS_RSSISTOP  | 0x018  | Stop the RSSI measurement                                                 |
| TASKS_BCSTART   | 0x01C  | Start the bit counter                                                     |
| TASKS_BCSTOP    | 0x020  | Stop the bit counter                                                      |
| EVENTS_READY    | 0x100  | RADIO has ramped up and is ready to be started                            |
| EVENTS_ADDRESS  | 0x104  | Address sent or received                                                  |
| EVENTS_PAYLOAD  | 0x108  | Packet payload sent or received                                           |
| EVENTS_END      | 0x10C  | Packet sent or received                                                   |
| EVENTS_DISABLED | 0x110  | RADIO has been disabled                                                   |
| EVENTS_DEVMATCH | 0x114  | A device address match occurred on the last received packet               |
| EVENTS_DEVMISS  | 0x118  | No device address match occurred on the last received packet              |
| EVENTS_RSSIEND  | 0x11C  | Sampling of receive signal strength complete.                             |
| EVENTS_BCMATCH  | 0x128  | Bit counter reached bit count value.                                      |
| EVENTS_CRCOK    | 0x130  | Packet received with CRC ok                                               |
| EVENTS_CRCERROR | 0x134  | Packet received with CRC error                                            |
| SHORTS          | 0x200  | Shortcut register                                                         |
| INTENSET        | 0x304  | Enable interrupt                                                          |
| INTENCLR        | 0x308  | Disable interrupt                                                         |
| CRCSTATUS       | 0x400  | CRC status                                                                |
| RXMATCH         | 0x408  | Received address                                                          |
| RXCRC           | 0x40C  | CRC field of previously received packet                                   |

| Register                    | Offset | Description                              |

 Each term in the CRC polynomial is mapped to a bit in this register which index corresponds to the term's exponent. The least significant term/bit is hard-wired internally to 1, and bit number 0 of the register content is ignored by the hardware. The following example is for an 8 bit CRC polynomial:  $x^8 + x^7 + x^3 + x^2 + 1 = 1\ 1000\ 1101$ .

Inter frame space is the time interval between two consecutive packets. It is defined as the time, in micro seconds, from the end of the last bit of the previous packet to the start of the first bit of the subsequent packet.

  ## 23.15 Electrical specification

### 23.15.1 General Radio Characteristics

| Symbol              | Description                      | Min. | Typ. | Max. | Units |
|---------------------|----------------------------------|------|------|------|-------|
| $f_{OP}$            | Operating frequencies            | 2360 |      | 2500 | MHz   |
| $f_{PLL,PROG,RES}$  | PLL programming resolution       |      | 2    |      | kHz   |
| $f_{PLL,CH,SP}$     | PLL channel spacing              |      | 1    |      | MHz   |
| $f_{\Delta,1M}$     | Frequency deviation @ 1 Msps     |      | ±170 |      | kHz   |
| $f_{\Delta,BLE,1M}$ | Frequency deviation @ BLE 1Msps  |      | ±250 |      | kHz   |
| $f_{\Delta,2M}$     | Frequency deviation @ 2 Msps     |      | ±320 |      | kHz   |
| $f_{\Delta,BLE,2M}$ | Frequency deviation @ BLE 2 Msps |      | ±500 |      | kHz   |
| $f_{skSPS}$         | On-the-air data rate             | 1    |      | 2    | Msps  |

### 23.15.2 Radio current consumption (Transmitter)

| Symbol                  | Description                                      | Min. | Typ. | Max. | Units |
|-------------------------|--------------------------------------------------|------|------|------|-------|
| $I_{TX,PLUS4dBm,DCDC}$  | TX only run current (DCDC, 3V) $P_{RF} = +4$ dBm |      | 7.5  |      | mA    |
| $I_{TX,PLUS4dBm}$       | TX only run current $P_{RF} = +4$ dBm            |      | 16.6 |      | mA    |
| $I_{TX,0dBm,DCDC}$      | TX only run current (DCDC, 3V) $P_{RF} = 0$ dBm  |      | 5.3  |      | mA    |
| $I_{TX,0dBm}$           | TX only run current $P_{RF} = 0$ dBm             |      | 11.6 |      | mA    |
| $I_{TX,MINUS4dBm,DCDC}$ | TX only run current DCDC, 3V $P_{RF} = -4$ dBm   |      | 4.2  |      | mA    |
| $I_{TX,MINUS4dBm}$      | TX only run current $P_{RF} = -4$ dBm            |      | 9.3  |      | mA    |
| $I_{TX,MINUS8dBm,DCDC}$ | TX only run current DCDC, 3V $P_{RF} = -8$ dBm   |      | 3.8  |      | mA    |

| Symbol                          | Description                                     | Min. | Typ. | Max. | Units |
|---------------------------------|-------------------------------------------------|------|------|------|-------|
| I <sub>TX,MINUS8dBm</sub>       | TX only run current $P_{RF} = -8$ dBm           |      | 8.4  |      | mA    |
| I <sub>TX,MINUS12dBm,DCDC</sub> | TX only run current DCDC, 3V $P_{RF} = -12$ dBm |      | 3.5  |      | mA    |
| I <sub>TX,MINUS12dBm</sub>      | TX only run current $P_{RF} = -12$ dBm          |      | 7.7  |      | mA    |
| I <sub>TX,MINUS16dBm,DCDC</sub> | TX only run current DCDC, 3V $P_{RF} = -16$ dBm |      | 3.3  |      | mA    |
| I <sub>TX,MINUS16dBm</sub>      | TX only run current $P_{RF} = -16$ dBm          |      | 7.3  |      | mA    |
| I <sub>TX,MINUS20dBm,DCDC</sub> | TX only run current DCDC, 3V $P_{RF} = -20$ dBm |      | 3.2  |      | mA    |
| I <sub>TX,MINUS20dBm</sub>      | TX only run current $P_{RF} = -20$ dBm          |      | 7.0  |      | mA    |
| I <sub>TX,MINUS40dBm,DCDC</sub> | TX only run current DCDC, 3V $P_{RF} = -40$ dBm |      | 2.7  |      | mA    |
| I <sub>TX,MINUS40dBm</sub>      | TX only run current $P_{RF} = -40$ dBm          |      | 5.9  |      | mA    |
| I <sub>START,TX,DCDC</sub>      | TX start-up current DCDC, 3V, $P_{RF} = 4$ dBm  |      | 4.0  |      | mA    |
| I <sub>START,TX</sub>           | TX start-up current, $P_{RF} = 4$ dBm           |      | 8.8  |      | mA    |

### 23.15.3 Radio current consumption (Receiver)

| Symbol                     | Description                                      | Min. | Typ. | Max. | Units |
|----------------------------|--------------------------------------------------|------|------|------|-------|
| I <sub>RX,1M,DCDC</sub>    | RX only run current (DCDC, 3V) 1Msps / 1Msps BLE |      | 5.4  |      | mA    |
| I <sub>RX,1M</sub>         | RX only run current 1Msps / 1Msps BLE            |      | 11.7 |      | mA    |
| I <sub>RX,2M,DCDC</sub>    | RX only run current (DCDC, 3V) 2Msps / 2Msps BLE |      | 5.8  |      | mA    |
| I <sub>RX,2M</sub>         | RX only run current 2Msps / 2Msps BLE            |      | 12.9 |      | mA    |
| I <sub>START,RX,DCDC</sub> | RX start-up current (DCDC 3V)                    |      | 3.5  |      | mA    |
| I <sub>START,RX,LDO</sub>  | RX start-up current (LDO 3V)                     |      | 7.5  |      | mA    |

### 23.15.4 Transmitter specification

| Symbol                 | Description                                                                | Min. | Typ. | Max. | Units |
|------------------------|----------------------------------------------------------------------------|------|------|------|-------|
| P <sub>RF</sub>        | Maximum output power                                                       |      | 4    | 6    | dBm   |
| P <sub>RFC</sub>       | RF power control range                                                     |      | 24   |      | dB    |
| P <sub>RFCR</sub>      | RF power accuracy                                                          |      |      | ±4   | dB    |
| P <sub>RF1,1</sub>     | 1st Adjacent Channel Transmit Power 1 MHz (1 Msps Nordic proprietary mode) |      | -25  |      | dBc   |
| P <sub>RF2,1</sub>     | 2nd Adjacent Channel Transmit Power 2 MHz (1 Msps Nordic proprietary mode) |      | -50  |      | dBc   |
| P <sub>RF1,2</sub>     | 1st Adjacent Channel Transmit Power 2 MHz (2 Msps Nordic proprietary mode) |      | -25  |      | dBc   |
| P <sub>RF2,2</sub>     | 2nd Adjacent Channel Transmit Power 4 MHz (2 Msps Nordic proprietary mode) |      | -50  |      | dBc   |
| P <sub>RF1,2,BLE</sub> | 1st Adjacent Channel Transmit Power 2 MHz (2 Msps BLE mode)                |      | -20  |      | dBc   |
| P <sub>RF2,2,BLE</sub> | 2nd Adjacent Channel Transmit Power 4 MHz (2 Msps BLE mode)                |      | -50  |      | dBc   |

### 23.15.5 Receiver operation

| Symbol                         | Description                                                                | Min. | Typ. | Max. | Units |
|--------------------------------|----------------------------------------------------------------------------|------|------|------|-------|
| P <sub>RX,MAX</sub>            | Maximum received signal strength at < 0.1% BER                             |      | 0    |      | dBm   |
| P <sub>SENS,IT,1M</sub>        | Sensitivity, 1Msps nRF mode <sup>16</sup>                                  |      | -93  |      | dBm   |
| P <sub>SENS,IT,SP,1M,BLE</sub> | Sensitivity, 1Msps BLE ideal transmitter, ≤37 bytes BER=1E-3 <sup>17</sup> |      | -96  |      | dBm   |
| P <sub>SENS,IT,LP,1M,BLE</sub> | Sensitivity, 1Msps BLE ideal transmitter ≥128 bytes BER=1E-4 <sup>18</sup> |      | -95  |      | dBm   |
| P <sub>SENS,IT,2M</sub>        | Sensitivity, 2Msps nRF mode <sup>19</sup>                                  |      | -89  |      | dBm   |

<sup>16</sup> Typical sensitivity applies when ADDR0 is used for receiver address correlation. When ADDR[1...7] are used for receiver address correlation, the typical sensitivity for this mode is degraded by 3dB.

<sup>17</sup> As defined in the Bluetooth Core Specification v4.0 Volume 6: Core System Package (Low Energy Controller Volume)

<sup>18</sup> Equivalent BER limit < 10E-04

<sup>19</sup> Typical sensitivity applies when ADDR0 is used for receiver address correlation. When ADDR[1...7] are used for receiver address correlation, the typical sensitivity for this mode is degraded by 3dB.

| Symbol                         | Description                                                         | Min. | Typ. | Max. | Units |
|--------------------------------|---------------------------------------------------------------------|------|------|------|-------|
| P <sub>SENS,IT,SP,2M,BLE</sub> | Sensitivity, 2Msps BLE ideal transmitter, Packet length <=37bytes   |      | -93  |      | dBm   |
| P <sub>SENS,DT,SP,2M,BLE</sub> | Sensitivity, 2Msps BLE dirty transmitter, Packet length <=37bytes   |      | -93  |      | dBm   |
| P <sub>SENS,IT,LP,2M,BLE</sub> | Sensitivity, 2Msps BLE ideal transmitter >= 128bytes                |      | -92  |      | dBm   |
| P <sub>SENS,DT,LP,2M,BLE</sub> | Sensitivity, 2Msps BLE dirty transmitter, Packet length >= 128bytes |      | -92  |      | dBm   |

### 23.15.6 RX selectivity

RX selectivity with equal modulation on interfering signal<sup>20</sup>

| Symbol                          | Description                                              | Min. | Typ. | Max. | Units |
|---------------------------------|----------------------------------------------------------|------|------|------|-------|
| C/I <sub>1M,co-channel</sub>    | 1Msps mode, Co-Channel interference                      |      | 9    |      | dB    |
| C/I <sub>1M,-1MHz</sub>         | 1 Msps mode, Adjacent (-1 MHz) interference              |      | -2   |      | dB    |
| C/I <sub>1M,+1MHz</sub>         | 1 Msps mode, Adjacent (+1 MHz) interference              |      | -10  |      | dB    |
| C/I <sub>1M,-2MHz</sub>         | 1 Msps mode, Adjacent (-2 MHz) interference              |      | -19  |      | dB    |
| C/I <sub>1M,+2MHz</sub>         | 1 Msps mode, Adjacent (+2 MHz) interference              |      | -42  |      | dB    |
| C/I <sub>1M,-3MHz</sub>         | 1 Msps mode, Adjacent (-3 MHz) interference              |      | -38  |      | dB    |
| C/I <sub>1M,+3MHz</sub>         | 1 Msps mode, Adjacent (+3 MHz) interference              |      | -48  |      | dB    |
| C/I <sub>1M,±6MHz</sub>         | 1 Msps mode, Adjacent (≥6 MHz) interference              |      | -50  |      | dB    |
| C/I <sub>1MBLE,co-channel</sub> | 1 Msps BLE mode, Co-Channel interference                 |      | 6    |      | dB    |
| C/I <sub>1MBLE,-1MHz</sub>      | 1 Msps BLE mode, Adjacent (-1 MHz) interference          |      | -2   |      | dB    |
| C/I <sub>1MBLE,+1MHz</sub>      | 1 Msps BLE mode, Adjacent (+1 MHz) interference          |      | -9   |      | dB    |
| C/I <sub>1MBLE,-2MHz</sub>      | 1 Msps BLE mode, Adjacent (-2 MHz) interference          |      | -22  |      | dB    |
| C/I <sub>1MBLE,+2MHz</sub>      | 1 Msps BLE mode, Adjacent (+2 MHz) interference          |      | -46  |      | dB    |
| C/I <sub>1MBLE,&gt;3MHz</sub>   | 1 Msps BLE mode, Adjacent (≥3 MHz) interference          |      | -50  |      | dB    |
| C/I <sub>1MBLE,image</sub>      | Image frequency Interference                             |      | -22  |      | dB    |
| C/I <sub>1MBLE,image,1MHz</sub> | Adjacent (1 MHz) interference to in-band image frequency |      | -35  |      | dB    |
| C/I <sub>2M,co-channel</sub>    | 2Msps mode, Co-Channel interference                      |      | 10   |      | dB    |
| C/I <sub>2M,-2MHz</sub>         | 2 Msps mode, Adjacent (-2 MHz) interference              |      | 6    |      | dB    |
| C/I <sub>2M,+2MHz</sub>         | 2 Msps mode, Adjacent (+2 MHz) interference              |      | -14  |      | dB    |
| C/I <sub>2M,-4MHz</sub>         | 2 Msps mode, Adjacent (-4 MHz) interference              |      | -20  |      | dB    |
| C/I <sub>2M,+4MHz</sub>         | 2 Msps mode, Adjacent (+4 MHz) interference              |      | -44  |      | dB    |
| C/I <sub>2M,-6MHz</sub>         | 2 Msps mode, Adjacent (-6 MHz) interference              |      | -42  |      | dB    |
| C/I <sub>2M,+6MHz</sub>         | 2 Msps mode, Adjacent (+6 MHz) interference              |      | -47  |      | dB    |
| C/I <sub>2M,≥12MHz</sub>        | 2 Msps mode, Adjacent (≥12 MHz) interference             |      | -52  |      | dB    |
| C/I <sub>2MBLE,co-channel</sub> | 2 Msps BLE mode, Co-Channel interference                 |      | 7    |      | dB    |
| C/I <sub>2MBLE,±2MHz</sub>      | 2 Msps BLE mode, Adjacent (±2 MHz) interference          |      | 0    |      | dB    |
| C/I <sub>2MBLE,±4MHz</sub>      | 2 Msps BLE mode, Adjacent (±4 MHz) interference          |      | -47  |      | dB    |
| C/I <sub>2MBLE,±6MHz</sub>      | 2 Msps BLE mode, Adjacent (±6 MHz) interference          |      | -49  |      | dB    |
| C/I <sub>2MBLE,image</sub>      | Image frequency Interference                             |      | -21  |      | dB    |
| C/I <sub>2MBLE,image,2MHz</sub> | Adjacent (2 MHz) interference to in-band image frequency |      | -36  |      | dB    |

### 23.15.7 RX intermodulation

RX intermodulation<sup>21</sup>

| Symbol                  | Description                                                  | Min. | Typ. | Max. | Units |
|-------------------------|--------------------------------------------------------------|------|------|------|-------|
| P <sub>IMD,1M</sub>     | IMD performance, 1 Msps (3 MHz, 4 MHz, and 5 MHz offset)     |      | -33  |      | dBm   |
| P <sub>IMD,1M,BLE</sub> | IMD performance, BLE 1 Msps (3 MHz, 4 MHz, and 5 MHz offset) |      | -30  |      | dBm   |
| P <sub>IMD,2M</sub>     | IMD performance, 2 Msps (6 MHz, 8 MHz, and 10 MHz offset)    |      | -33  |      | dBm   |

<sup>20</sup> Wanted signal level at PIN = -67 dBm. One interferer is used, having equal modulation as the wanted signal. The input power of the interferer where the sensitivity equals BER = 0.1% is presented

<sup>21</sup> Wanted signal level at PIN = -64 dBm. Two interferers with equal input power are used. The interferer closest in frequency is not modulated, the other interferer is modulated equal with the wanted signal. The input power of the interferers where the sensitivity equals BER = 0.1% is presented.

| Symbol                  | Description                                                   | Min. | Typ. | Max. | Units |
|-------------------------|---------------------------------------------------------------|------|------|------|-------|
| P <sub>IMD,2M,BLE</sub> | IMD performance, BLE 2 Msps (6 MHz, 8 MHz, and 10 MHz offset) |      | -32  |      | dBm   |

## 23.15.8 Radio timing

| Symbol                    | Description                                                                                    | Min. | Typ. | Max. | Units |
|---------------------------|------------------------------------------------------------------------------------------------|------|------|------|-------|
| t <sub>TXEN</sub>         | Time between TXEN task and READY event after channel FREQUENCY configured                      |      | 140  |      | us    |
| t <sub>TXEN,FAST</sub>    | Time between TXEN task and READY event after channel FREQUENCY configured (Fast Mode)          |      | 40   |      | us    |
| t <sub>TXDISABLE</sub>    | Time between DISABLE task and DISABLED event when the radio was in TX and mode is set to 1Msps |      | 6    |      | us    |
| t <sub>TXDISABLE,2M</sub> | Time between DISABLE task and DISABLED event when the radio was in TX and mode is set to 2Msps |      | 4    |      | us    |
| t <sub>RXEN</sub>         | Time between the RXEN task and READY event after channel FREQUENCY configured in default mode  |      | 140  |      | us    |
| t <sub>RXEN,FAST</sub>    | Time between the RXEN task and READY event after channel FREQUENCY configured in fast mode     |      | 40   |      | us    |
| t <sub>SWITCH</sub>       | The minimum time taken to switch from RX to TX or TX to RX (channel FREQUENCY unchanged)       |      | 20   |      | us    |
| t <sub>RXDISABLE</sub>    | Time between DISABLE task and DISABLED event when the radio was in RX                          |      | 0    |      | us    |
| t <sub>TXCHAIN</sub>      | TX chain delay                                                                                 |      | 0.6  |      | us    |
| t <sub>RXCHAIN</sub>      | RX chain delay                                                                                 |      | 9.4  |      | us    |
| t <sub>RXCHAIN,2M</sub>   | RX chain delay in 2Msps mode                                                                   |      | 5    |      | us    |

## 23.15.9 Received Signal Strength Indicator (RSSI) specifications

| Symbol                     | Description                              | Min. | Typ. | Max. | Units |
|----------------------------|------------------------------------------|------|------|------|-------|
| RSSI <sub>ACC</sub>        | RSSI Accuracy Valid range -90 to -20 dBm |      | ±2   |      | dB    |
| RSSI <sub>RESOLUTION</sub> | RSSI resolution                          |      | 1    |      | dB    |
| RSSI <sub>PERIOD</sub>     | Sample period                            |      | 0.25 |      | us    |

## 23.15.10 Jitter

| Symbol                      | Description                                                                                      | Min. | Typ. | Max. | Units |

## 24 TIMER — Timer/counter

The TIMER can operate in two modes: timer and counter.

**Figure 42: Block schematic for timer/counter**

The timer/counter runs on the high-frequency clock source (HFCLK) and includes a four-bit (1/2X) prescaler that can divide the timer input clock from the HFCLK controller. Clock source selection between PCLK16M and PCLK1M is automatic according to TIMER base frequency set by the prescaler. The TIMER base frequency is always given as 16 MHz divided by the prescaler value.

The PPI system allows a TIMER event to trigger a task of any other system peripheral of the device. The PPI system also enables the TIMER task/event features to generate periodic output and PWM signals to any GPIO. The number of input/outputs used at the same time is limited by the number of GPIOTE channels.

The TIMER can operate in two modes, Timer mode and Counter mode. In both modes, the TIMER is started by triggering the START task, and stopped by triggering the STOP task. After the timer is stopped the timer can resume timing/counting by triggering the START task again. When timing/counting is resumed, the timer will continue from the value it had prior to being stopped.

In Timer mode, the TIMER's internal Counter register is incremented by one for every tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Figure 42: Block schematic for timer/counter](#) on page 234. The timer frequency is derived from PCLK16M as shown below, using the values specified in the PRESCALER register:

$$f_{\text{TIMER}} = 16 \text{ MHz} / (2^{\text{PRESCALER}})$$

When  $f_{\text{TIMER}} \leq 1 \text{ MHz}$  the TIMER will use PCLK1M instead of PCLK16M for reduced power consumption.

In counter mode, the TIMER's internal Counter register is incremented by one each time the COUNT task is triggered, that is, the timer frequency and the prescaler are not utilized in counter mode. Similarly, the COUNT task has no effect in Timer mode.

The TIMER's maximum value is configured by changing the bit-width of the timer in the [BITMODE](#) on page 239 register.

[PRESCALER](#) on page 239 and the [BITMODE](#) on page 239 must only be updated when the timer is stopped. If these registers are updated while the TIMER is started then this may result in unpredictable behavior.

When the timer is incremented beyond its maximum value the Counter register will overflow and the TIMER will automatically start over from zero.

The Counter register can be cleared, that is, its internal value set to zero explicitly, by triggering the CLEAR task.

The TIMER implements multiple capture/compare registers.

Independent of prescaler setting the accuracy of the TIMER is equivalent to one tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Figure 42: Block schematic for timer/counter](#) on page 234.

## 24.1 Capture

The TIMER implements one capture task for every available capture/compare register.

Every time the CAPTURE[n] task is triggered, the Counter value is copied to the CC[n] register.

## 24.2 Compare

The TIMER implements one COMPARE event for every available capture/compare register.

A COMPARE event is generated when the Counter is incremented and then becomes equal to the value specified in one of the capture compare registers. When the Counter value becomes equal to the value specified in a capture compare register CC[n], the corresponding compare event COMPARE[n] is generated.

[BITMODE](#) on page 239 specifies how many bits of the Counter register and the capture/compare register that are used when the comparison is performed. Other bits will be ignored.

## 24.3 Task delays

After the TIMER is started, the CLEAR task, COUNT task and the STOP task will guarantee to take effect within one clock cycle of the PCLK16M.

## 24.4 Task priority

If the START task and the STOP task are triggered at the same time, that is, within the same period of PCLK16M, the STOP task will be prioritized.

## 24.5 Registers

**Table 42: Instances**

| Base address | Peripheral | Instance | Description | Configuration                                     |
|--------------|------------|----------|-------------|---------------------------------------------------|
| 0x40008000   | TIMER      | TIMER0   | Timer 0     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x40009000   | TIMER      | TIMER1   | Timer 1     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x4000A000   | TIMER      | TIMER2   | Timer 2     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x4001A000   | TIMER      | TIMER3   | Timer 3     | This timer instance has 6 CC registers (CC[0..5]) |
| 0x4001B000   | TIMER      | TIMER4   | Timer 4     | This timer instance has 6 CC registers (CC[0..5]) |

**Table 43: Register Overview**

| Register    | Offset | Description |
|-------------|--------|-------------|
| TASKS_START | 0x000  | Start Timer |

| Register          | Offset | Description                                                   |
|-------------------|--------|---------------------------------------------------------------|
| TASKS_STOP        | 0x004  | Stop Timer                                                    |
| TASKS_COUNT       | 0x008  | Increment Timer (Counter mode only)                           |
| TASKS_CLEAR       | 0x00C  | Clear time                                                    |
| TASKS_SHUTDOWN    | 0x010  | Shut down timer <span style="float: right;">Deprecated</span> |
| TASKS_CAPTURE[0]  | 0x040  | Capture Timer value to CC[0] register                         |
| TASKS_CAPTURE[1]  | 0x044  | Capture Timer value to CC[1] register                         |
| TASKS_CAPTURE[2]  | 0x048  | Capture Timer value to CC[2] register                         |
| TASKS_CAPTURE[3]  | 0x04C  | Capture Timer value to CC[3] register                         |
| TASKS_CAPTURE[4]  | 0x050  | Capture Timer value to CC[4] register                         |
| TASKS_CAPTURE[5]  | 0x054  | Capture Timer value to CC[5] register                         |
| EVENTS_COMPARE[0] | 0x140  | Compare event on CC[0] match                                  |
| EVENTS_COMPARE[1] | 0x144  | Compare event on CC[1] match                                  |
| EVENTS_COMPARE[2] | 0x148  | Compare event on CC[2] match                                  |
| EVENTS_COMPARE[3] | 0x14C  | Compare event on CC[3] match                                  |
| EVENTS_COMPARE[4] | 0x150  | Compare event on CC[4] match                                  |
| EVENTS_COMPARE[5] | 0x154  | Compare event on CC[5] match                                  |
| <b>SHORTS</b>     | 0x200  | Shortcut register                                             |
| <b>INTENSET</b>   | 0x304  | Enable interrupt                                              |
| <b>INTENCLR</b>   | 0x308  | Disable interrupt                                             |
| <b>MODE</b>       | 0x504  | Timer mode selection                                          |
| <b>BITMODE</b>    | 0x508  | Configure the number of bits used by the TIMER                |
| <b>PRESCALER</b>  | 0x510  | Timer prescaler register                                      |
| <b>CC[0]</b>      | 0x540  | Capture/Compare register 0                                    |
| <b>CC[1]</b>      | 0x544  | Capture/Compare register 1                                    |
| <b>CC[2]</b>      | 0x548  | Capture/Compare register 2                                    |

   | I <sub>TIMER_16M</sub>   | Run current with 16 MHz clock input (PCLK16M)             | 50   | 70   | 120  | μA    |
| t <sub>TIMER,START</sub> | Time from START task is given until timer starts counting |      | 0.25 |      | μs    |

## 25 RTC — Real-time counter

The Real-time counter (RTC) module provides a generic, low power timer on the low-frequency clock source (LFCLK).

**Figure 43: RTC block schematic**

The RTC module features a 24-bit COUNTER, a 12-bit (1/X) prescaler, capture/compare registers, and a tick event generator for low power, tickless RTOS implementation.

### 25.1 Clock source

The RTC will run off the LFCLK.

The COUNTER resolution will therefore be 30.517  $\mu$ s. Depending on the source, the RTC is able to run while the HFCLK is OFF and PCLK16M is not available.

The software has to explicitly start LFCLK before using the RTC.

See [CLOCK — Clock control](#) on page 101 for more information about clock sources.

### 25.2 Resolution versus overflow and the PRESCALER

Counter increment frequency:

$$f_{\text{RTC}} [\text{kHz}] = 32.768 / (\text{PRESCALER} + 1)$$

The PRESCALER register is read/write when the RTC is stopped. The PRESCALER register is read-only once the RTC is STARTed. Writing to the PRESCALER register when the RTC is started has no effect.

The PRESCALER is restarted on START, CLEAR and TRIGOVFLW, that is, the prescaler value is latched to an internal register (<<PRESC>>) on these tasks.

Examples:

1. Desired COUNTER frequency 100 Hz (10 ms counter period)

$$\text{PRESCALER} = \text{round}(32.768 \text{ kHz} / 100 \text{ Hz}) - 1 = 327$$

$$f_{\text{RTC}} = 99.9 \text{ Hz}$$

10009.576  $\mu$ s counter period

- Desired COUNTER frequency 8 Hz (125 ms counter period)

PRESALER =  $\text{round}(32.768 \text{ kHz} / 8 \text{ Hz}) - 1 = 4095$

$f_{\text{RTC}} = 8 \text{ Hz}$

125 ms counter period

**Table 44: RTC resolution versus overflow**

| Prescaler    | Counter resolution | Overflow       |
|--------------|--------------------|----------------|
| 0            | 30.517 $\mu$ s     | 512 seconds    |
| $2^8 - 1$    | 7812.5 $\mu$ s     | 131072 seconds |
| $2^{12} - 1$ | 125 ms             | 582.542 hours  |

## 25.3 COUNTER register

The COUNTER increments on LFCLK when the internal PRESCALER register (<<PRESC>>) is 0x00. <<PRESC>> is reloaded from the PRESCALER register. If enabled, the TICK event occurs on each increment of the COUNTER. The TICK event is disabled by default.

**Figure 44: Timing diagram - COUNTER\_PRESCALER\_0**

**Figure 45: Timing diagram - COUNTER\_PRESCALER\_1**

## 25.4 Overflow features

The TRIGOVFLW task sets the COUNTER value to 0xFFFFF0 to allow SW test of the overflow condition. OVRFLW occurs when COUNTER overflows from 0xFFFFF to 0.

**Important:** The OVRFLW event is disabled by default.

## 25.5 TICK event

The TICK event enables low power "tick-less" RTOS implementation as it optionally provides a regular interrupt source for a RTOS without the need to use the ARM® SysTick feature.

**Important:** The TICK event is disabled by default.

To optimize RTC power consumption, events in the RTC can be individually disabled to prevent PCLK16M and HFCLK being requested when those events are triggered. This is managed using the EVTEN register.

This means that the RTC implements a slightly different task and event system compared to the standard system described in [Peripheral interface](#) on page 68. The RTC task and event system is illustrated in [Figure 46: Tasks, events and interrupts in the RTC](#) on page 244.

### Figure 46: Tasks, events and interrupts in the RTC

There are a number of Compare registers.

For more information, see [Registers](#) on page 248.

When setting a compare register, the following behavior of the RTC compare event should be noted:

- If a CC register value is 0 when a CLEAR task is set, this will not trigger a COMPARE event.

**Figure 47: Timing diagram - COMPARE\_CLEAR**

- If a CC register is N and the COUNTER value is N when the START task is set, this will not trigger a COMPARE event.

**Figure 48: Timing diagram - COMPARE\_START**

- COMPARE occurs when a CC register is N and the COUNTER value transitions from N-1 to N.

**Figure 49: Timing diagram - COMPARE**

- If the COUNTER is N, writing N+2 to a CC register is guaranteed to trigger a COMPARE event at N+2.

**Figure 50: Timing diagram - COMPARE\_N+2**

- If the COUNTER is N, writing N or N+1 to a CC register may not trigger a COMPARE event.

**Figure 51: Timing diagram - COMPARE\_N+1**

- If the COUNTER is N and the current CC register value is N+1 or N+2 when a new CC value is written, a match may trigger on the previous CC value before the new value takes effect. If the current CC value greater than N+2 when the new value is written, there will be no event due to the old value.

**Figure 52: Timing diagram - COMPARE\_N-1**

## 25.8 TASK and EVENT jitter/delay

Jitter or delay in the RTC is due to the peripheral clock being a low frequency clock (LFCLK) which is not synchronous to the faster PCLK16M.

Registers in the peripheral interface, part of the PCLK16M domain, have a set of mirrored registers in the LFCLK domain. For example, the COUNTER value accessible from the CPU is in the PCLK16M domain and is latched on read from an internal register called COUNTER in the LFCLK domain. COUNTER is the register which is actually modified each time the RTC ticks. These registers must be synchronised between clock domains (PCLK16M and LFCLK).

The following is a summary of the jitter introduced on tasks and events. Figures illustrating jitter follow.

**Table 45: RTC jitter magnitudes on tasks**

| Task                            | Delay             |
|---------------------------------|-------------------|
| CLEAR, STOP, START, TRIGOVRFLOW | +15 to 46 $\mu$ s |

**Table 46: RTC jitter magnitudes on events**

| Operation/Function               | Jitter         |
|----------------------------------|----------------|
| START to COUNTER increment       | +/- 15 $\mu$ s |
| COMPARE to COMPARE <sup>22</sup> | +/- 62.5 ns    |

1. CLEAR and STOP (and TRIGOVRFLOW; not shown) will be delayed as long as it takes for the peripheral to clock a falling edge and rising of the LFCLK. This is between 15.2585  $\mu$ s and 45.7755  $\mu$ s – rounded to 15  $\mu$ s and 46  $\mu$ s for the remainder of the section.

**Figure 53: Timing diagram - DELAY\_CLEAR**

**Figure 54: Timing diagram - DELAY\_STOP**

2. The START task will start the RTC. Assuming that the LFCLK was previously running and stable, the first increment of COUNTER (and instance of TICK event) will be typically after 30.5  $\mu$ s +/- 15  $\mu$ s. In some cases, in particular if the RTC is STARTed before the LFCLK is running, that timing can be up to ~250  $\mu$ s. The software should therefore wait for the first TICK if it has to make sure the RTC is running. Sending a TRIGOVRFLOW task sets the COUNTER to a value close to overflow. However, since the update of COUNTER relies on a stable LFCLK, sending this task while LFCLK is not running will start LFCLK, but the update will then be delayed by the same amount of time of up to ~250  $\mu$ s. The figures show the smallest and largest delays to on the START task which appears as a +/- 15  $\mu$ s jitter on the first COUNTER increment.

<sup>22</sup> Assumes RTC runs continuously between these events.

**Note:** 32.768 kHz clock jitter is additional to the numbers provided above.

Figure 55: Timing diagram - JITTER\_START-

Figure 56: Timing diagram - JITTER\_START+

## 25.9 Reading the COUNTER register

To read the COUNTER register, the internal  $\ll\text{COUNTER}\gg$  value is sampled.

To ensure that the  $\ll\text{COUNTER}\gg$  is safely sampled (considering an LFCLK transition may occur during a read), the CPU and core memory bus are halted for three cycles by lowering the core PREADY signal. The Read takes the CPU 2 cycles in addition resulting in the COUNTER register read taking a fixed five PCLK16M clock cycles.

Figure 57: Timing diagram - COUNTER\_READ

## 25.10 Registers

Table 47: Instances

| Base address | Peripheral | Instance | Description         | Configuration                               |
|--------------|------------|----------|---------------------|---------------------------------------------|
| 0x4000B000   | RTC        | RTC0     | Real-time counter 0 | CC[0..2] implemented, CC[3] not implemented |
| 0x40011000   | RTC        | RTC1     | Real-time counter 1 | CC[0..3] implemented                        |

| Base address | Peripheral | Instance | Description         | Configuration        |
|--------------|------------|----------|---------------------|----------------------|
| 0x40024000   | RTC        | RTC2     | Real-time counter 2 | CC[0..3] implemented |

**Table 48: Register Overview**

| Register          | Offset | Description                                                                                        |
|-------------------|--------|----------------------------------------------------------------------------------------------------|
| TASKS_START       | 0x000  | Start RTC COUNTER                                                                                  |
| TASKS_STOP        | 0x004  | Stop RTC COUNTER                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |  |  |  | | Id               |  |  |  | |------------------|----------------------------------------------|------|------|------|-------|
| I <sub>RTC</sub> | Run current Real Time Counter (LFCLK source) |      | 0.1  |      | μA    |

## 26 RNG — Random number generator

The Random number generator (RNG) generates true non-deterministic random numbers based on internal thermal noise that are suitable for cryptographic purposes. The RNG does not require a seed value.

**Figure 58: Random number generator**

The RNG is started by triggering the START task and stopped by triggering the STOP task. When started, new random numbers are generated continuously and written to the VALUE register when ready. A VALRDY event is generated for every new random number that is written to the VALUE register. This means that after a VALRDY event is generated the CPU has the time until the next VALRDY event to read out the random number from the VALUE register before it is overwritten by a new random number.

### 26.1 Bias correction

A bias correction algorithm is employed on the internal bit stream to remove any bias toward '1' or '0'. The bits are then queued into an eight-bit register for parallel readout from the VALUE register.

It is possible to enable bias correction in the CONFIG register. This will result in slower value generation, but will ensure a statistically uniform distribution of the random values.

### 26.2 Speed

The time needed to generate one random byte of data is unpredictable, and may vary from one byte to the next. This is especially true when bias correction is enabled.

### 26.3 Registers

**Table 49: Instances**

| Base address | Peripheral | Instance | Description             | Configuration |
|--------------|------------|----------|-------------------------|---------------|
| 0x400D000    | RNG        | RNG      | Random number generator |               |

**Table 50: Register Overview**

| Register      | Offset | Description                                                                     |
|---------------|--------|---------------------------------------------------------------------------------|
| TASKS_START   | 0x000  | Task starting the random number generator                                       |
| TASKS_STOP    | 0x004  | Task stopping the random number generator                                       |
| EVENTS_VALRDY | 0x100  | Event being generated for every new random number written to the VALUE register |

## 26.4 Electrical specification

### 26.4.1 RNG Electrical Specification

| Symbol          | Description                                                                                                                          | Min. | Typ. | Max. | Units   |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------|------|------|------|---------|
| $I_{RNG}$       | Run current, CPU sleeping.                                                                                                           |      | 500  |      | $\mu A$ |
| $t_{RNG,START}$ | Time from setting the START task to generation begins. This is a one-time delay on START signal and does not apply between samples.  |      | 128  |      | $\mu s$ |
| $t_{RNG,RAW}$   | Run time per byte without bias correction. Uniform distribution of 0 and 1 is not guaranteed.                                        |      | 30   |      | $\mu s$ |
| $t_{RNG,BC}$    | Run time per byte with bias correction. Uniform distribution of 0 and 1 is guaranteed. Time to generate a byte cannot be guaranteed. |      | 120  |      | $\mu s$ |

## 27 TEMP — Temperature sensor

The temperature sensor measures die temperature over the temperature range of the device. Linearity compensation can be implemented if required by the application.

Listed here are the main features for TEMP:

- Temperature range is greater than or equal to operating temperature of the device
- Resolution is 0.25 degrees

TEMP is started by triggering the START task.

When the temperature measurement is completed, a DATARDY event will be generated and the result of the measurement can be read from the TEMP register.

To achieve the measurement accuracy stated in the electrical specification, the crystal oscillator must be selected as the HFCLK source, see [CLOCK — Clock control](#) on page 101 for more information.

When the temperature measurement is completed, TEMP analog electronics power down to save power.

TEMP only supports one-shot operation, meaning that every TEMP measurement has to be explicitly started using the START task.

### 27.1 Registers

**Table 51: Instances**

| Base address | Peripheral | Instance | Description        | Configuration |
|--------------|------------|----------|--------------------|---------------|
| 0x4000C000   | TEMP       | TEMP     | Temperature sensor |               |

**Table 52: Register Overview**

| Register                 | Offset | Description                                   |
|--------------------------|--------|-----------------------------------------------|
| TASKS_START              | 0x000  | Start temperature measurement                 |
| TASKS_STOP               | 0x004  | Stop temperature measurement                  |
| EVENTS_DATARDY           | 0x100  | Temperature measurement complete, data ready  |
| <a href="#">INTENSET</a> | 0x304  | Enable interrupt                              |
| <a href="#">INTENCLR</a> | 0x308  | Disable interrupt                             |

    ## 27.2 Electrical specification

### 27.2.1 Temperature Sensor Electrical Specification

| Symbol                  | Description                                               | Min. | Typ.    | Max. | Units |
|-------------------------|-----------------------------------------------------------|------|---------|------|-------|
| t <sub>TEMP</sub>       | Time required for temperature measurement                 |      | 36      |      | μs    |
| T <sub>TEMP,RANGE</sub> | Temperature sensor range                                  | -40  |         | 85   | °C    |
| T <sub>TEMP,ACC</sub>   | Temperature sensor accuracy                               | -5   |         | 5    | °C    |
| T <sub>TEMP,RES</sub>   | Temperature sensor resolution                             |      | 0.25    |      | °C    |
| T <sub>TEMP,STB</sub>   | Sample to sample stability at constant device temperature |      | +/-0.25 |      | °C    |
| T <sub>TEMP,OFFST</sub> | Sample offset at 25°C                                     | -2.5 |         | 2.5  | °C    |

## 28 ECB — AES electronic codebook mode encryption

The AES electronic codebook mode encryption (ECB) can be used for a range of cryptographic functions like hash generation, digital signatures, and keystream generation for data encryption/decryption. The ECB encryption block supports 128 bit AES encryption (encryption only, not decryption).

AES ECB operates with EasyDMA access to system Data RAM for in-place operations on cleartext and ciphertext during encryption. ECB uses the same AES core as the CCM and AAR blocks and is an asynchronous operation which may not complete if the AES core is busy.

AES ECB features:

- 128 bit AES encryption
- Supports standard AES ECB block encryption
- Memory pointer support
- DMA data transfer

AES ECB performs a 128 bit AES block encrypt. At the STARTECB task, data and key is loaded into the algorithm by EasyDMA. When output data has been written back to memory, the ENDECB event is triggered.

AES ECB can be stopped by triggering the STOPECB task.

### 28.1 Shared resources

The ECB, CCM, and AAR share the same AES module. The ECB will always have lowest priority and if there is a sharing conflict during encryption, the ECB operation will be aborted and an ERRORECB event will be generated.

### 28.2 EasyDMA

The ECB implements an EasyDMA mechanism for reading and writing to the Data RAM. This DMA cannot access the program memory or any other parts of the memory area except RAM.

If the ECBDATAPTR is not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

The EasyDMA will have finished accessing the Data RAM when the ENDECB or ERRORECB is generated.

### 28.3 ECB data structure

Input to the block encrypt and output from the block encrypt are stored in the same data structure. ECBDATAPTR should point to this data structure before STARTECB is initiated.

**Table 53: ECB data structure overview**

| Property   | Address offset | Description                         |
|------------|----------------|-------------------------------------|
| KEY        | 0              | 16 byte AES key                     |
| CLEARTEXT  | 16             | 16 byte AES cleartext input block   |
| CIPHERTEXT | 32             | 16 byte AES ciphertext output block |

## 28.4 Registers

**Table 54: Instances**

| Base address | Peripheral | Instance | Description                                          | Configuration |
|--------------|------------|----------|------------------------------------------------------|---------------|
| 0x4000E000   | ECB        | ECB      | AES Electronic Code Book (ECB) mode block encryption |               |

**Table 55: Register Overview**

| Register          | Offset | Description                                                            |
|-------------------|--------|------------------------------------------------------------------------|
| TASKS_STARTECB    | 0x000  | Start ECB block encrypt                                                |
| TASKS_STOPECB     | 0x004  | Abort a possible executing ECB operation                               |

## 28.5 Electrical specification

### 28.5.1 ECB Electrical Specification

| Symbol    | Description                             | Min. | Typ. | Max. | Units   |
|-----------|-----------------------------------------|------|------|------|---------|
| $t_{ECB}$ | Run time per 16 byte block in all modes |      | 6    |      | $\mu s$ |

## 29 CCM — AES CCM mode encryption

Cipher block chaining - message authentication code (CCM) mode is an authenticated encryption algorithm designed to provide both authentication and confidentiality during data transfer. CCM combines counter mode encryption and CBC-MAC authentication. The CCM terminology "Message authentication code (MAC)" is called the "Message integrity check (MIC)" in *Bluetooth* terminology and also in this document.

The CCM block generates an encrypted keystream that is applied to input data using the XOR operation and generates the 4 byte MIC field in one operation. The CCM and radio can be configured to work synchronously. The CCM will encrypt in time for transmission and decrypt after receiving bytes into memory from the Radio. All operations can complete within the packet RX or TX time. CCM on this device is implemented according to *Bluetooth* requirements and the algorithm as defined in IETF [RFC3610](#), and depends on the AES-128 block cipher. A description of the CCM algorithm can also be found in [NIST Special Publication 800-38C](#). The *Bluetooth* specification describes the configuration of counter mode blocks and encryption blocks to implement compliant encryption for BLE.

The CCM block uses EasyDMA to load key, counter mode blocks (including the nonce required), and to read/write plain text and cipher text.

The AES CCM supports three operations: key-stream generation, packet encryption, and packet decryption. All these operations are done in compliance with the *Bluetooth* specification.<sup>23</sup> A new key-stream must be generated before a new packet encryption or packet decryption operation can be started.

A key-stream is generated by triggering the KSGEN task. An ENDKSGEN event will be generated when the new key-stream has been generated. The key-stream will be stored in the AES CCM's temporary memory area, specified by the SCRATCHPTR, where it will be used in subsequent encryption and decryption operations.

Encryption is started by triggering the CRYPT task with the MODE register set to ENCRYPTION. Similarly, decryption is started by triggering the same task with MODE set to DECRYPTION. An ENDCRYPT event will be generated when packet encryption is completed as well as when packet decryption is completed, see [Figure 59: Key-stream generation followed by encryption or decryption. The shortcut is optional.](#) on page 267.

**Figure 59: Key-stream generation followed by encryption or decryption. The shortcut is optional.**

Key-stream generation, packet encryption, and packet decryption operations utilize the configuration specified in the data structure pointed to by the CNFPTR pointer. It is necessary to configure this pointer and its underlying data structure, and the MODE register before the KSGEN task is triggered. It is also necessary to configure the INPTR pointer and the OUTPTR pointer before the CRYPT task is triggered.

If a shortcut is used between ENDKSGEN event and CRYPT task, the INPTR pointer and the OUTPTR pointer must be configured before the KSGEN task is triggered.

The AES CCM supports different packet lengths, this is configured via the PACKETLENGTH field in the MODE register.

<sup>23</sup> *Bluetooth* AES CCM 128 bit block encryption, see *Bluetooth* Core specification Version 4.0.

## 29.1 Shared resources

The CCM shares registers and other resources with other peripherals that have the same ID as the CCM. The user must therefore disable all peripherals that have the same ID as the CCM before the CCM can be configured and used.

Disabling a peripheral that have the same ID as the CCM will not reset any of the registers that are shared with the CCM. It is therefore important to configure all relevant CCM registers explicitly to secure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 24 for details on peripherals and their IDs.

## 29.2 Encryption

During packet encryption, the AES CCM will read the unencrypted packet located in RAM at the address specified in the INPTR pointer, encrypt the packet and append a four byte long Message Integrity Check (MIC) field to the packet.

The AES CCM will also modify the length field of the packet to adjust for the appended MIC field, that is, add four bytes to the length, and store the resulting packet back into RAM at the address specified in the OUTPTR pointer, see [Figure 60: Encryption](#) on page 268.

Empty packets (length field is set to 0) will not be encrypted but instead moved unmodified through the AES CCM.

**Figure 60: Encryption**

## 29.3 Decryption

During packet decryption, the AES CCM will read the encrypted packet located in RAM at the address specified in the INPTR pointer, decrypt the packet, authenticate the packet's MIC field and generate the appropriate MIC status.

The AES CCM will also modify the length field of the packet to adjust for the MIC field, that is, subtract four bytes from the length, and then store the decrypted packet into RAM at the address pointed to by the OUTPTR pointer, see [Figure 61: Decryption](#) on page 269.

The CCM is only able to decrypt packets that are at least 5 bytes long, that is, 1 byte or more encrypted payload (EPL) and 4 bytes of MIC. The CCM will therefore generate a MIC error for packets where the length field is set to 1, 2, 3 or 4.

Empty packets (length field is set to 0) will not be decrypted but instead moved unmodified through the AES CCM, these packets will always pass the MIC check.

**Figure 61: Decryption**

## 29.4 AES CCM and RADIO concurrent operation

The AES CCM is designed to run in parallel with the RADIO to enable on-the-fly encryption and decryption of RADIO packets without CPU involvement. To facilitate this, the RADIO has to be configured with specific settings.

**Table 56: Radio configuration settings**

| Radio parameter | Value     | Description                                                                                                                                                                                                                                                                                           |
|-----------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCNF0.SOLEN     | 1         | Length of HEADER field in: <a href="#">Table 58: Data structure for unencrypted packet</a> on page 271 and <a href="#">Table 59: Data structure for encrypted packet</a> on page 271.                                                                                                                 |

## 29.5 Encrypting packets on-the-fly in radio transmit mode

When the AES CCM is encrypting a packet on-the-fly at the same time as the RADIO is transmitting it, the RADIO must read the encrypted packet from the same memory location as the AES CCM is writing to.

The OUTPTR pointer in the AES CCM must therefore point to the same memory location as the PACKETPTR pointer in the RADIO, see [Figure 62: Configuration of on-the-fly encryption](#) on page 269.

**Figure 62: Configuration of on-the-fly encryption**

In order to match the RADIO's timing, the KSGEN task must be triggered no later than when the START task in the RADIO is triggered, in addition the shortcut between the ENDKSGEN event and the CRYPT task must be enabled. This use-case is illustrated in [Figure 63: On-the-fly encryption using a PPI connection](#) on page 270 using a PPI connection between the READY event in the RADIO and the KSGEN task in the AES CCM.

**Figure 63: On-the-fly encryption using a PPI connection**

## 29.6 Decrypting packets on-the-fly in radio receive mode

When the AES CCM is decrypting a packet on-the-fly at the same time as the RADIO is receiving it, the AES CCM must read the encrypted packet from the same memory location as the RADIO is writing to.

The INPTR pointer in the AES CCM must therefore point to the same memory location as the PACKETPTR pointer in the RADIO, see [Figure 64: Configuration of on-the-fly decryption](#) on page 270.

**Figure 64: Configuration of on-the-fly decryption**

In order to match the RADIO's timing, the KSGEN task must be triggered no later than when the START task in the RADIO is triggered. In addition, the CRYPT task must be triggered no earlier than when the ADDRESS event is generated by the RADIO.

If the CRYPT task is triggered exactly at the same time as the ADDRESS event is generated by the RADIO, the AES CCM will guarantee that the decryption is completed no later than when the END event in the RADIO is generated.

This use-case is illustrated in [Figure 65: On-the-fly decryption using a PPI connection between the READY event in the RADIO and the KSGEN task in the AES CCM](#) on page 271 using a PPI connection between the ADDRESS event in the RADIO and the CRYPT task in the AES CCM. The KSGEN task is triggered from the READY event in the RADIO through a PPI connection.

**Figure 65: On-the-fly decryption using a PPI connection between the READY event in the RADIO and the KSGEN task in the AES CCM**

## 29.7 CCM data structure

The CCM data structure is located in Data RAM at the memory location specified by the CNFPTR pointer register.

**Table 57: CCM data structure overview**

| Property | Address offset | Description                                                                                                                |
|----------|----------------|----------------------------------------------------------------------------------------------------------------------------|
| KEY      | 0              | 16 byte AES key                                                                                                            |
| PKTCTR   | 16             | Octet0 (LSO) of packet counter                                                                                             |
|          | 17             | Octet1 of packet counter                                                                                                   |
|          | 18             | Octet2 of packet counter                                                                                                   |
|          | 19             | Octet3 of packet counter                                                                                                   |
|          | 20             | Bit 6 – Bit 0: Octet4 (7 most significant bits of packet counter, with Bit 6 being the most significant bit) Bit7: Ignored |
|          | 21             | Ignored                                                                                                                    |
|          | 22             | Ignored                                                                                                                    |
|          | 23             | Ignored                                                                                                                    |
|          | 24             | Bit 0: Direction bit Bit 7 – Bit 1: Zero padded                                                                            |
| IV       | 25             | 8 byte initialization vector (IV) Octet0 (LSO) of IV, Octet1 of IV, ..., Octet7 (MSO) of IV                                |

The NONCE vector (as specified by the *Bluetooth* Core Specification) will be generated by hardware based on the information specified in the CCM data structure from [Table 57: CCM data structure overview](#) on page 271.

**Table 58: Data structure for unencrypted packet**

| Property | Address offset | Description                            |
|----------|----------------|----------------------------------------|
| HEADER   | 0              | Packet Header                          |
| LENGTH   | 1              | Number of bytes in unencrypted payload |
| RFU      | 2              | Reserved Future Use                    |
| PAYLOAD  | 3              | Unencrypted payload                    |

**Table 59: Data structure for encrypted packet**

| Property | Address offset     | Description                                                                                      |
|----------|--------------------|--------------------------------------------------------------------------------------------------|
| HEADER   | 0                  | Packet Header                                                                                    |
| LENGTH   | 1                  | Number of bytes in encrypted payload including length of MIC                                     |
|          |                    | <b>Important:</b> LENGTH will be 0 for empty packets since the MIC is not added to empty packets |
| RFU      | 2                  | Reserved Future Use                                                                              |
| PAYLOAD  | 3                  | Encrypted payload                                                                                |
| MIC      | 3 + payload length | ENCRYPT: 4 bytes encrypted MIC                                                                   |

| Property | Address offset | Description                                         |
|----------|----------------|-----------------------------------------------------|
|          |                | <b>Important:</b> MIC is not added to empty packets |

## 29.8 EasyDMA and ERROR event

The CCM implements an EasyDMA mechanism for reading and writing to the RAM.

In some scenarios where the CPU and other DMA enabled peripherals are accessing the RAM at the same time, the CCM DMA could experience some bus conflicts which may also result in an error during encryption. If this happens, the ERROR event will be generated.

The EasyDMA will have finished accessing the RAM when the ENDKSGEN and ENDCRYPT events are generated.

If the CNFPTR, SCRATCHPTR, INPTR and the OUTPTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

## 29.9 Registers

### Table 60: Instances

| Base address | Peripheral | Instance | Description             | Configuration |
|--------------|------------|----------|-------------------------|---------------|
| 0x4000F000   | CCM        | CCM      | AES CCM Mode Encryption |               |

### Table 61: Register Overview

| Register        | Offset | Description                                                                        |
|-----------------|--------|------------------------------------------------------------------------------------|
| TASKS_KSGEN     | 0x000  | Start generation of key-stream. This operation will stop by itself when completed. |
| TASKS_CRYPT     | 0x004  | Start encryption/decryption. This operation will stop by itself when completed.    |
| TASKS_STOP      | 0x008  | Stop encryption/decryption                                                         |
| EVENTS_ENDKSGEN | 0x100  | Key-stream generation complete                                                     |
| EVENTS_ENDCRYPT | 0x104  | Encrypt/decrypt complete                                                           |
| EVENTS_ERROR    | 0x108  | CCM error event                                                                    |
| SHORTS          | 0x200  | Shortcut register                                                                  |
| INTENSET        | 0x304  | Enable interrupt                                                                   |
| INTENCLR        | 0x308  | Disable interrupt                                                                  |
| MICSTATUS       | 0x400  | MIC check result                                                                   |
| ENABLE          | 0x500  | Enable                                                                             |
| MODE            | 0x504  | Operation mode                                                                     |
| CNFPTR          | 0x508  | Pointer to data structure holding AES key and NONCE vector                         |
| INPTR           | 0x50C  | Input pointer                                                                      |
| OUTPTR          | 0x510  | Output pointer                                                                     |
| SCRATCHPTR      | 0x514  | Pointer to data area used for temporary storage                                    |

| A                | RW | SCRATCHPTR |       |    |       | Pointer to a scratch data area used for temporary storage |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |

The scratch area is used for temporary storage of data during key-stream generation and encryption.

A space of 43 bytes, or (16 + MAXPACKETSIZE) bytes, whatever is largest, must be reserved in RAM.

## 30 AAR — Accelerated address resolver

Accelerated address resolver is a cryptographic support function for implementing the "Resolvable Private Address Resolution Procedure" described in the *Bluetooth Core specification v4.0*. "Resolvable private address generation" should be achieved using ECB and is not supported by AAR.

The procedure allows two devices that share a secret key to generate and resolve a hash based on their device address. The AAR block enables real-time address resolution on incoming packets when configured as described in this chapter. This allows real-time packet filtering (whitelisting) using a list of known shared keys (Identity Resolving Keys (IRK) in *Bluetooth*).

### 30.1 Shared resources

The AAR shares registers and other resources with the peripherals that have the same ID as the AAR. The user must therefore disable all peripherals that have the same ID as the AAR before the AAR can be configured and used.

Disabling a peripheral that have the same ID as the AAR will not reset any of the registers that are shared with the AAR. It is therefore important to configure all relevant AAR registers explicitly to secure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 24 for details on peripherals and their IDs.

### 30.2 EasyDMA

The AAR implements EasyDMA for reading and writing to the RAM. The EasyDMA will have finished accessing the RAM when the END, RESOLVED, and NOTRESOLVED events are generated.

If the IRKPTR, ADDRPTR and the SCRATCHPTR is not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

### 30.3 Resolving a resolvable address

As per *Bluetooth* specification, a private resolvable address is composed of six bytes.

**Figure 66: Resolvable address**

To resolve an address the ADDRPTR register must point to the start of packet. The resolver is started by triggering the START task. A RESOLVED event is generated when the AAR manages to resolve the address using one of the Identity Resolving Keys (IRK) found in the IRK data structure. The AAR will use the IRK specified in the register IRK0 to IRK15 starting from IRK0. How many to be used is specified by the NIRK register. The AAR module will generate a NOTRESOLVED event if it is not able to resolve the address using the specified list of IRKs.

The AAR will go through the list of available IRKs in the IRK data structure and for each IRK try to resolve the address according to the Resolvable Private Address Resolution Procedure described in the *Bluetooth Specification*<sup>24</sup>. The time it takes to resolve an address may vary depending on where in the list the

<sup>24</sup> *Bluetooth Specification Version 4.0 [Vol 3] chapter 10.8.2.3.*

resolvable address is located. The resolution time will also be affected by RAM accesses performed by other peripherals and the CPU. See the [Electrical specifications](#) for more information about resolution time.

The AAR will only do a comparison of the received address to those programmed in the module. And not check what type of address it actually is.

The AAR will stop as soon as it has managed to resolve the address, or after trying to resolve the address using NIRK number of IRKs from the IRK data structure. The AAR will generate an END event after it has stopped.

Figure 67: Address resolution with packet preloaded into RAM

## 30.4 Use case example for chaining RADIO packet reception with address resolution using AAR

The AAR may be started as soon as the 6 bytes required by the AAR have been received by the RADIO and stored in RAM. The ADDRPTR pointer must point to the start of packet.

Figure 68: Address resolution with packet loaded into RAM by the RADIO

## 30.5 IRK data structure

The IRK data structure is located in RAM at the memory location specified by the CNFPTR pointer register.

Table 62: IRK data structure overview

| Property | Address offset | Description               |
|----------|----------------|---------------------------|
| IRK0     | 0              | IRK number 0 (16 - byte)  |
| IRK1     | 16             | IRK number 1 (16 - byte)  |
| ...      | ...            | ...                       |
| IRK15    | 240            | IRK number 15 (16 - byte) |

  |-------------|---------------------------------------|------|------|------|---------|
| $t_{AAR,8}$ | Time for address resolution of 8 IRKs |      | 48   |      | $\mu$ s |

## 31 SPIM — Serial peripheral interface master with EasyDMA

The SPI master can communicate with multiple slaves using individual chip select signals for each of the slave devices attached to a bus.

Listed here are the main features for the SPIM

- Three SPIM instances
- SPI mode 0-3
- EasyDMA direct transfer to/from RAM for both SPI Slave and SPI Master
- Individual selection of IO pin for each SPI signal

**Figure 69: SPIM — SPI master with EasyDMA**

The SPIM does not implement support for chip select directly. Therefore, the CPU must use available GPIOs to select the correct slave and control this independently of the SPI master. The SPIM supports SPI modes 0 through 3. The CONFIG register allows setting CPOL and CPHA appropriately.

**Table 65: SPI modes**

| Mode                  | Clock polarity<br>CPOL | Clock phase<br>CPHA |
|-----------------------|------------------------|---------------------|
| SPI_MODE 0 (Leading)  | 0 (Active High)        | 0 (Active High)     |
| SPI_MODE 0 (Leading)  | 1 (Active Low)         | 1 (Active Low)      |
| SPI_MODE 1 (Trailing) | 0 (Active High)        | 0 (Active High)     |
| SPI_MODE 1 (Trailing) | 1 (Active Low)         | 1 (Active Low)      |

### 31.1 Shared resources

The SPI shares registers and other resources with other peripherals that have the same ID as the SPI. Therefore, the user must disable all peripherals that have the same ID as the SPI before the SPI can be configured and used.

Disabling a peripheral that has the same ID as the SPI will not reset any of the registers that are shared with the SPI. It is therefore important to configure all relevant SPI registers explicitly to secure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 24 for details on peripherals and their IDs.

## 31.2 EasyDMA

The SPI master implements EasyDMA for reading and writing of data packets from and to the DATA RAM without CPU involvement.

The RXD.PTR and TXD.PTR point to the RXD buffer (receive buffer) and TXD buffer (transmit buffer) respectively, see [Figure 69: SPIM — SPI master with EasyDMA](#) on page 281. RXD.MAXCNT and TXD.MAXCNT specify the maximum number of bytes allocated to the buffers.

The SPI master will automatically stop transmitting after TXD.MAXCNT bytes have been transmitted and RXD.MAXCNT bytes have been received. If TXD.MAXCNT is larger than RXD.MAXCNT, the superfluous received bytes will be ignored. If RXD.MAXCNT is larger than TXD.MAXCNT, the remaining transmitted bytes will contain the value defined in the ORC register.

If the RXD.PTR and the TXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next transmission immediately after having received the STARTED event.

The ENDRX/ENDTX event indicate that EasyDMA has finished accessing respectively the RX/TX buffer in RAM. The END event gets generated when both RX and TX are finished accessing the buffers in RAM.

### 31.2.1 EasyDMA list

EasyDMA supports one list type.

The supported list type is:

- Array list

#### EasyDMA array list

The EasyDMA array list can be represented by the data structure `ArrayList_type`.

For illustration, see the code example below. This data structure includes only a buffer with size equal to `Channel.MAXCNT`. EasyDMA will use the `Channel.MAXCNT` register to determine when the buffer is full. Replace 'Channel' by the specific data channel you want to use, for instance 'NRF\_SPIM->RXD', 'NRF\_SPIM->TXD', 'NRF\_TWIM->RXD', etc.

The `Channel.MAXCNT` register cannot be specified larger than the actual size of the buffer. If `Channel.MAXCNT` is specified larger than the size of the buffer, the EasyDMA channel may overflow the buffer.

This array list does not provide a mechanism to explicitly specify where the next item in the list is located. Instead, it assumes that the list is organized as a linear array where items are located one after the other in RAM.

```
#define BUFFER_SIZE 4

typedef struct ArrayList
{
    uint8_t buffer[BUFFER_SIZE];
} ArrayList_type;

ArrayList_type MyArrayList[3];
```

```
//replace 'Channel' below by the specific data channel you want to use,
//      for instance 'NRF_SPIM->RXD', 'NRF_TWIM->RXD', etc.
Channel.MAXCNT = BUFFER_SIZE;
Channel.PTR = &MyArrayList;
```

Figure 70: EasyDMA array list

### 31.3 SPI master transaction sequence

An SPI master transaction consists of a sequence started by the START task followed by a number of events, and finally the STOP task.

An SPI master transaction is started by triggering the START task. The ENDTX event will be generated when the transmitter has transmitted all bytes in the TXD buffer as specified in the TXD.MAXCNT register. The ENDRX event will be generated when the receiver has filled the RXD buffer, i.e. received the last possible byte as specified in the RXD.MAXCNT register.

Following a START task, the SPI master will generate an END event when both ENDRX and ENDTX have been generated.

The SPI master is stopped by triggering the STOP task. A STOPPED event is generated when the SPI master has stopped.

If the ENDRX event has not already been generated when the SPI master has come to a stop, the SPI master will generate the ENDRX event explicitly even though the RX buffer is not full.

If the ENDTX event has not already been generated when the SPI master has come to a stop, the SPI master will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

The SPI master is a synchronous interface, and for every byte that is sent, a different byte will be received at the same time; this is illustrated in [Figure 71: SPI master transaction](#) on page 284.

**Figure 71: SPI master transaction**

## 31.4 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

## 31.5 Master mode pin configuration

The SCK, MOSI, and MISO signals associated with the SPI master are mapped to physical pins according to the configuration specified in the PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively.

The PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI master is enabled, and retained only as long as the device is in ON mode. PSEL.SCK, PSEL.MOSI and PSEL.MISO must only be configured when the SPI master is disabled.

To secure correct behavior in the SPI, the pins used by the SPI must be configured in the GPIO peripheral as described in [Table 66: GPIO configuration](#) on page 284 prior to enabling the SPI. This configuration must be retained in the GPIO for the selected IOs as long as the SPI is enabled.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

**Table 66: GPIO configuration**

| SPI master signal | SPI master pin            | Direction | Output value        | Comments |
|-------------------|---------------------------|-----------|---------------------|----------|
| SCK               | As specified in PSEL.SCK  | Output    | Same as CONFIG.CPOL |          |
| MOSI              | As specified in PSEL.MOSI | Output    | 0                   |          |
| MISO              | As specified in PSEL.MISO | Input     | Not applicable      |          |

## 31.6 Registers

Table 67: Instances

| Base address | Peripheral | Instance | Description  | Configuration |
|--------------|------------|----------|--------------|---------------|
| 0x40003000   | SPIM       | SPIM0    | SPI master 0 |               |
| 0x40004000   | SPIM       | SPIM1    | SPI master 1 |               |
| 0x40023000   | SPIM       | SPIM2    | SPI master 2 |               |

Table 68: Register Overview

| Register       | Offset | Description                                                                         |
|----------------|--------|-------------------------------------------------------------------------------------|
| TASKS_START    | 0x010  | Start SPI transaction                                                               |
| TASKS_STOP     | 0x014  | Stop SPI transaction                                                                |
| TASKS_SUSPEND  | 0x01C  | Suspend SPI transaction                                                             |
| TASKS_RESUME   | 0x020  | Resume SPI transaction                                                              |
| EVENTS_STOPPED | 0x104  | SPI transaction has stopped                                                         |
| EVENTS_ENDRX   | 0x110  | End of RXD buffer reached                                                           |
| EVENTS_END     | 0x118  | End of RXD buffer and TXD buffer reached                                            |
| EVENTS_ENDTX   | 0x120  | End of TXD buffer reached                                                           |
| EVENTS_STARTED | 0x14C  | Transaction started                                                                 |

<sup>a</sup> At 25pF load, including GPIO pin capacitance, see GPIO spec.

## 32 SPIS — Serial peripheral interface slave with EasyDMA

SPI slave (SPIS) is implemented with EasyDMA support for ultra low power serial communication from an external SPI master. EasyDMA in conjunction with hardware-based semaphore mechanisms removes all real-time requirements associated with controlling the SPI slave from a low priority CPU execution context.

**Figure 73: SPI slave**

The SPIS supports SPI modes 0 through 3. The CONFIG register allows setting CPOL and CPHA appropriately.

**Table 69: SPI modes**

| Mode      | Clock polarity<br>CPOL | Clock phase<br>CPHA |
|-----------|------------------------|---------------------|
| SPI_MODE0 | 0 (Leading)            | 0 (Active High)     |
| SPI_MODE1 | 0 (Leading)            | 1 (Active Low)      |
| SPI_MODE2 | 1 (Trailing)           | 0 (Active High)     |
| SPI_MODE3 | 1 (Trailing)           | 1 (Active Low)      |

### 32.1 Shared resources

The SPI slave shares registers and other resources with other peripherals that have the same ID as the SPI slave. Therefore, you must disable all peripherals that have the same ID as the SPI slave before the SPI slave can be configured and used.

Disabling a peripheral that has the same ID as the SPI slave will not reset any of the registers that are shared with the SPI slave. It is important to configure all relevant SPI slave registers explicitly to secure that it operates correctly.

The Instantiation table in [Instantiation](#) on page 24 shows which peripherals have the same ID as the SPI slave.

### 32.2 EasyDMA

The SPI slave implements EasyDMA for reading and writing to and from the RAM. The END event indicates that EasyDMA has finished accessing the buffer in RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

### 32.3 SPI slave operation

SPI slave uses two memory pointers, RXD.PTR and TXD.PTR, that point to the RXD buffer (receive buffer) and TXD buffer (transmit buffer) respectively. Since these buffers are located in RAM, which can be accessed by both the SPI slave and the CPU, a hardware based semaphore mechanism is implemented to enable safe sharing.

See [Figure 74: SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 294.

Before the CPU can safely update the RXD.PTR and TXD.PTR pointers it must first acquire the SPI semaphore. The CPU can acquire the semaphore by triggering the ACQUIRE task and then receiving the ACQUIRED event. When the CPU has updated the RXD.PTR and TXD.PTR pointers the CPU must release the semaphore before the SPI slave will be able to acquire it. The CPU releases the semaphore by triggering the RELEASE task. This is illustrated in [Figure 74: SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 294. Triggering the RELEASE task when the semaphore is not granted to the CPU will have no effect.

The semaphore mechanism does not, at any time, prevent the CPU from performing read or write access to the RXD.PTR register, the TXD.PTR registers, or the RAM that these pointers are pointing to. The semaphore is only telling when these can be updated by the CPU so that safe sharing is achieved.

The semaphore is by default assigned to the CPU after the SPI slave is enabled. No ACQUIRED event will be generated for this initial semaphore handover. An ACQUIRED event will be generated immediately if the ACQUIRE task is triggered while the semaphore is assigned to the CPU.

The SPI slave will try to acquire the semaphore when CSN goes low. If the SPI slave does not manage to acquire the semaphore at this point, the transaction will be ignored. This means that all incoming data on MOSI will be discarded, and the DEF (default) character will be clocked out on the MISO line throughout the whole transaction. This will also be the case even if the semaphore is released by the CPU during the transaction. In case of a race condition where the CPU and the SPI slave try to acquire the semaphore at the same time, as illustrated in lifeline item 2 in [Figure 74: SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 294, the semaphore will be granted to the CPU.

If the SPI slave acquires the semaphore, the transaction will be granted. The incoming data on MOSI will be stored in the RXD buffer and the data in the TXD buffer will be clocked out on MISO.

When a granted transaction is completed and CSN goes high, the SPI slave will automatically release the semaphore and generate the END event.

As long as the semaphore is available the SPI slave can be granted multiple transactions one after the other. If the CPU is not able to reconfigure the TXD.PTR and RXD.PTR between granted transactions, the same TX data will be clocked out and the RX buffers will be overwritten. To prevent this from happening, the END\_ACQUIRE shortcut can be used. With this shortcut enabled the semaphore will be handed over to the CPU automatically after the granted transaction has completed, giving the CPU the ability to update the TXPTR and RXPTR between every granted transaction.

If the CPU tries to acquire the semaphore while it is assigned to the SPI slave, an immediate handover will not be granted. However, the semaphore will be handed over to the CPU as soon as the SPI slave has released the semaphore after the granted transaction is completed. If the END\_ACQUIRE shortcut is enabled and the CPU has triggered the ACQUIRE task during a granted transaction, only one ACQUIRE request will be served following the END event.

The MAXRX register specifies the maximum number of bytes the SPI slave can receive in one granted transaction. If the SPI slave receives more than MAXRX number of bytes, an OVERFLOW will be indicated in the STATUS register and the incoming bytes will be discarded.

The MAXTX parameter specifies the maximum number of bytes the SPI slave can transmit in one granted transaction. If the SPI slave is forced to transmit more than MAXTX number of bytes, an OVERREAD will be indicated in the STATUS register and the ORC character will be clocked out.

The RXD.AMOUNT and TXD.AMOUNT registers are updated when a granted transaction is completed. The TXD.AMOUNT register indicates how many bytes were read from the TX buffer in the last transaction, that is, ORC (over-read) characters are not included in this number. Similarly, the RXD.AMOUNT register indicates how many bytes were written into the RX buffer in the last transaction.

The ENDRX event is generated when the RX buffer has been filled.

Figure 74: SPI transaction when shortcut between END and ACQUIRE is enabled

## 32.4 Pin configuration

The CSN, SCK, MOSI, and MISO signals associated with the SPI slave are mapped to physical pins according to the configuration specified in the PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively. If the CONNECT field of any of these registers is set to Disconnected, the associated SPI slave signal will not be connected to any physical pins.

The PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI slave is enabled, and retained only as long as the device is in System ON mode, see [POWER — Power supply](#) on page 78 chapter for more information about power modes. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO must only be configured when the SPI slave is disabled.

To secure correct behavior in the SPI slave, the pins used by the SPI slave must be configured in the GPIO peripheral as described in [Table 70: GPIO configuration before enabling peripheral](#) on page 295 before enabling the SPI slave. This is to secure that the pins used by the SPI slave are driven correctly if the SPI

slave itself is temporarily disabled, or if the device temporarily enters System OFF. This configuration must be retained in the GPIO for the selected I/Os as long as the SPI slave is to be recognized by an external SPI master.

The MISO line is set in high impedance as long as the SPI slave is not selected with CSN.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

**Table 70: GPIO configuration before enabling peripheral**

| SPI signal | SPI pin                   | Direction | Output value   | Comment                                      |
|------------|---------------------------|-----------|----------------|----------------------------------------------|
| CSN        | As specified in PSEL.CSN  | Input     | Not applicable |                                              |
| SCK        | As specified in PSEL.SCK  | Input     | Not applicable |                                              |
| MOSI       | As specified in PSEL.MOSI | Input     | Not applicable |                                              |
| MISO       | As specified in PSEL.MISO | Input     | Not applicable | Emulates that the SPI slave is not selected. |

## 32.5 Registers

**Table 71: Instances**

| Base address | Peripheral | Instance | Description | Configuration |
|--------------|------------|----------|-------------|---------------|
| 0x40003000   | SPIS       | SPIS0    | SPI slave 0 |               |
| 0x40004000   | SPIS       | SPIS1    | SPI slave 1 |               |
| 0x40023000   | SPIS       | SPIS2    | SPI slave 2 |               |

**Table 72: Register Overview**

| Register          | Offset | Description                                                 |            |
|-------------------|--------|-------------------------------------------------------------|------------|
| TASKS_ACQUIRE     | 0x024  | Acquire SPI semaphore                                       |            |
| TASKS_RELEASE     | 0x028  | Release SPI semaphore, enabling the SPI slave to acquire it |            |
| EVENTS_END        | 0x104  | Granted transaction completed                               |            |
| EVENTS_ENDRX      | 0x110  | End of RXD buffer reached                                   |            |
| EVENTS_ACQUIRED   | 0x128  | Semaphore acquired                                          |            |
| <i>SHORTS</i>     | 0x200  | Shortcut register                                           |            |
| <i>INTENSET</i>   | 0x304  | Enable interrupt                                            |            |
| <i>INTENCLR</i>   | 0x308  | Disable interrupt                                           |            |
| <i>SEMSTAT</i>    | 0x400  | Semaphore status register                                   |            |
| <i>STATUS</i>     | 0x440  | Status from last transaction                                |            |
| <i>ENABLE</i>     | 0x500  | Enable SPI slave                                            |            |
| <i>PSELSCK</i>    | 0x508  | Pin select for SCK                                          | Deprecated |
| <i>PSELMISO</i>   | 0x50C  | Pin select for MISO                                         | Deprecated |
| <i>PSELMOSI</i>   | 0x510  | Pin select for MOSI                                         | Deprecated |
| <i>PSELCSN</i>    | 0x514  | Pin select for CSN                                          | Deprecated |
| <i>PSEL.SCK</i>   | 0x508  | Pin select for SCK                                          |            |
| <i>PSEL.MISO</i>  | 0x50C  | Pin select for MISO signal                                  |            |
| <i>PSEL.MOSI</i>  | 0x510  | Pin select for MOSI signal                                  |            |
| <i>PSEL.CSN</i>   | 0x514  | Pin select for CSN signal                                   |            |
| <i>RXDPTR</i>     | 0x534  | RXD data pointer                                            | Deprecated |
| <i>MAXRX</i>      | 0x538  | Maximum number of bytes in receive buffer                   | Deprecated |
| <i>AMOUNTRX</i>   | 0x53C  | Number of bytes received in last granted transaction        | Deprecated |
| <i>RXD.PTR</i>    | 0x534  | RXD data pointer                                            |            |
| <i>RXD.MAXCNT</i> | 0x538  | Maximum number of bytes in receive buffer                   |            |
| <i>RXD.AMOUNT</i> | 0x53C  | Number of bytes received in last granted transaction        |            |
| <i>TXDPTR</i>     | 0x544  | TXD data pointer                                            | Deprecated |
| <i>MAXTX</i>      | 0x548  | Maximum number of bytes in transmit buffer                  | Deprecated |
| <i>AMOUNTTX</i>   | 0x54C  | Number of bytes transmitted in last granted transaction     | Deprecated |
| <i>TXD.PTR</i>    | 0x544  | TXD data pointer                                            |            |
| <i>TXD.MAXCNT</i> | 0x548  | Maximum number of bytes in transmit buffer                  |            |
| <i>TXD.AMOUNT</i> | 0x54C  | Number of bytes transmitted in last granted transaction     |            |
| <i>CONFIG</i>     | 0x554  | Configuration register                                      |            |

| Register   | Offset | Description                                                                 |
|------------|--------|-----------------------------------------------------------------------------|
| <i>DEF</i> | 0x55C  | Default character. Character clocked out in case of an ignored transaction. |
| <i>ORC</i> | 0x5C0  | Over-read character                                                         |

  ## 32.6 Electrical specification

### 32.6.1 SPIS slave interface electrical specifications

| Symbol              | Description                                                                      | Min. | Typ.                    | Max.            | Units   |
|---------------------|----------------------------------------------------------------------------------|------|-------------------------|-----------------|---------|
| $f_{SPIS}$          | Bit rates for SPIS <sup>27</sup>                                                 |      |                         | 8 <sup>28</sup> | Mbps    |
| $I_{SPIS,2Mbps}$    | Run current for SPIS, 2 Mbps                                                     |      | 45                      |                 | $\mu A$ |
| $I_{SPIS,8Mbps}$    | Run current for SPIS, 8 Mbps                                                     |      | 45                      |                 | $\mu A$ |
| $I_{SPIS,IDLE}$     | Idle current for SPIS (STARTed, no CSN activity)                                 |      | 1                       |                 | $\mu A$ |
| $t_{SPIS,LP,START}$ | Time from RELEASE task to ready to receive/transmit (CSN active), Low power mode |      | $t_{SPIS,CL,STAR}$<br>+ |                 | $\mu s$ |
| $t_{SPIS,CL,START}$ | Time from RELEASE task to receive/transmit (CSN active), Constant latency mode   |      | 0.125                   |                 | $\mu s$ |

### 32.6.2 Serial Peripheral Interface Slave (SPIS) timing specifications

| Symbol                 | Description                                  | Min.                     | Typ. | Max. | Units |
|------------------------|----------------------------------------------|--------------------------|------|------|-------|
| $t_{SPIS,CCKIN,8Mbps}$ | SCK input period at 8Mbps                    |                          | 125  |      | ns    |
| $t_{SPIS,CCKIN,4Mbps}$ | SCK input period at 4Mbps                    |                          | 250  |      | ns    |
| $t_{SPIS,CCKIN,2Mbps}$ | SCK input period at 2Mbps                    |                          | 500  |      | ns    |
| $t_{SPIS,RFCKIN}$      | SCK input rise/fall time                     |                          |      | 30   | ns    |

Figure 75: SPIS timing diagram

<sup>27</sup> Higher bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>28</sup> The actual maximum data rate depends on the master's CLK to MISO and MOSI setup and hold timings.

<sup>a</sup> At 25pF load, including GPIO capacitance, see GPIO spec.

<sup>29</sup> This is to ensure compatibility to SPI masters sampling MISO on the same edge as MOSI is output

Figure 76: Common SPIM and SPIS timing diagram

## 33 TWIM — I<sup>2</sup>C compatible two-wire interface master with EasyDMA

TWI master with EasyDMA (TWIM) is a two-wire half-duplex master which can communicate with multiple slave devices connected to the same bus

Listed here are the main features for TWIM:

- I<sup>2</sup>C compatible
- 100 kbps, 250 kbps, or 400 kbps
- Support for clock stretching
- EasyDMA

The two-wire interface can communicate with a bi-directional wired-AND bus with two lines (SCL, SDA). The protocol makes it possible to interconnect up to 127 individually addressable devices. TWIM is not compatible with CBUS.

The GPIOs used for each two-wire interface line can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

**Figure 77: TWI master with EasyDMA**

A typical TWI setup consists of one master and one or more slaves. For an example, see [Figure 78: A typical TWI setup comprising one master and three slaves](#) on page 306. This TWIM is only able to operate as a single master on the TWI bus. Multi-master bus configuration is not supported.

**Figure 78: A typical TWI setup comprising one master and three slaves**

This TWI master supports clock stretching performed by the slaves. The TWI master is started by triggering the STARTTX or STARTRX tasks, and stopped by triggering the STOP task. The TWI master will generate a STOPPED event when it has stopped following a STOP task.

The TWI master cannot get stopped while it is suspended, so the STOP task has to be issued after the TWI master has been resumed.

After the TWI master is started, the STARTTX task or the STARTRX task should not be triggered again before the TWI master has stopped, i.e. following a LASTRX, LASTTX or STOPPED event.

If a NACK is clocked in from the slave, the TWI master will generate an ERROR event.

### 33.1 Shared resources

The TWI master shares registers and other resources with other peripherals that have the same ID as the TWI master. Therefore, you must disable all peripherals that have the same ID as the TWI master before the TWI master can be configured and used.

Disabling a peripheral that has the same ID as the TWI master will not reset any of the registers that are shared with the TWI master. It is therefore important to configure all relevant registers explicitly to secure that the TWI master operates correctly.

The Instantiation table in [Instantiation](#) on page 24 shows which peripherals have the same ID as the TWI.

### 33.2 EasyDMA

The TWI master implements EasyDMA for reading and writing to and from the RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

#### 33.2.1 EasyDMA list

EasyDMA supports one list type.

The supported list type is:

- Array list

##### EasyDMA array list

The EasyDMA array list can be represented by the data structure `ArrayList_type`.

For illustration, see the code example below. This data structure includes only a buffer with size equal to `Channel.MAXCNT`. EasyDMA will use the `Channel.MAXCNT` register to determine when the buffer is full. Replace 'Channel' by the specific data channel you want to use, for instance 'NRF\_SPIM->RXD', 'NRF\_SPIM->TXD', 'NRF\_TWIM->RXD', etc.

The Channel.MAXCNT register cannot be specified larger than the actual size of the buffer. If Channel.MAXCNT is specified larger than the size of the buffer, the EasyDMA channel may overflow the buffer.

This array list does not provide a mechanism to explicitly specify where the next item in the list is located. Instead, it assumes that the list is organized as a linear array where items are located one after the other in RAM.

```
#define BUFFER_SIZE 4

typedef struct ArrayList
{
    uint8_t buffer[BUFFER_SIZE];
} ArrayList_type;

ArrayList_type MyArrayList[3];

//replace 'Channel' below by the specific data channel you want to use,
//      for instance 'NRF_SPIM->RXD', 'NRF_TWIM->RXD', etc.
Channel.MAXCNT = BUFFER_SIZE;
Channel.PTR = &MyArrayList;
```

**Figure 79: EasyDMA array list**

### 33.3 Master write sequence

A TWI master write sequence is started by triggering the STARTTX task. After the STARTTX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1).

The address must match the address of the slave device that the master wants to write to. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) generated by the slave.

After receiving the ACK bit, the TWI master will clock out the data bytes found in the transmit buffer located in RAM at the address specified in the TXD.PTR register. Each byte clocked out from the master will be followed by an ACK/NACK bit clocked in from the slave.

A typical TWI master write sequence is illustrated in [Figure 80: TWI master writing data to a slave](#) on page 308. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect; this event can be used to synchronize the software.

**Figure 80: TWI master writing data to a slave**

The TWI master will generate a LASTTX event when it starts to transmit the last byte, this is illustrated in [Figure 80: TWI master writing data to a slave](#) on page 308

The TWI master is stopped by triggering the STOP task, this task should be triggered during the transmission of the last byte to secure that the TWI will stop as fast as possible after sending the last byte. It is safe to use the shortcut between LASTTX and STOP to accomplish this.

Note that the TWI master does not stop by itself when the whole RAM buffer has been sent, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

The TWI master cannot get stopped while it is suspended, so the STOP task has to be issued after the TWI master has been resumed.

### 33.4 Master read sequence

A TWI master read sequence is started by triggering the STARTRX task. After the STARTRX task has been triggered the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE = 0, READ = 1). The address must match the address of the slave device that the master wants to read from. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK = 1) generated by the slave.

After having sent the ACK bit the TWI slave will send data to the master using the clock generated by the master.

Data received will be stored in RAM at the address specified in the RXD.PTR register. The TWI master will generate an ACK after all but the last byte received from the slave. The TWI master will generate a NACK after the last byte received to indicate that the read sequence shall stop.

A typical TWI master read sequence is illustrated in [Figure 81: The TWI master reading data from a slave](#) on page 309. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect; this event can be used to synchronize the software.

The TWI master will generate a LASTRX event when it is ready to receive the last byte, this is illustrated in [Figure 81: The TWI master reading data from a slave](#) on page 309. If RXD.MAXCNT > 1 the LASTRX event is generated after sending the ACK of the previously received byte. If RXD.MAXCNT = 1 the LASTRX event is generated after receiving the ACK following the address and READ bit.

The TWI master is stopped by triggering the STOP task, this task must be triggered before the NACK bit is supposed to be transmitted. The STOP task can be triggered at any time during the reception of the last byte. It is safe to use the shortcut between LASTRX and STOP to accomplish this.

Note that the TWI master does not stop by itself when the RAM buffer is full, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

The TWI master cannot get stopped while it is suspended, so the STOP task has to be issued after the TWI master has been resumed.

**Figure 81: The TWI master reading data from a slave**

### 33.5 Master repeated start sequence

A typical repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave. This example uses shortcuts to perform the simplest type of repeated start sequence, i.e. one write followed by one read. The same approach can be used to perform a repeated start sequence where the sequence is read followed by write.

The figure [Figure 82: A repeated start sequence, where the TWI master writes two bytes followed by reading 4 bytes from the slave](#) on page 309 illustrates this:

**Figure 82: A repeated start sequence, where the TWI master writes two bytes followed by reading 4 bytes from the slave**

If a more complex repeated start sequence is needed and the TWI firmware driver is serviced in a low priority interrupt it may be necessary to use the SUSPEND task and SUSPENDED event to guarantee that the correct tasks are generated at the correct time. This is illustrated in [Figure 83: A double repeated start sequence using the SUSPEND task to secure safe operation in low priority interrupts](#) on page 310.

**Figure 83: A double repeated start sequence using the SUSPEND task to secure safe operation in low priority interrupts**

## 33.6 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

## 33.7 Master mode pin configuration

The SCL and SDA signals associated with the TWI master are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI master is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL, PSEL.SDA must only be configured when the TWI master is disabled.

To secure correct signal levels on the pins used by the TWI master when the system is in OFF mode, and when the TWI master is disabled, these pins must be configured in the GPIO peripheral as described in [Table 73: GPIO configuration before enabling peripheral](#) on page 310.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

**Table 73: GPIO configuration before enabling peripheral**

| TWI master signal | TWI master pin           | Direction | Output value   | Drive strength |
|-------------------|--------------------------|-----------|----------------|----------------|
| SCL               | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA               | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

## 33.8 Registers

**Table 74: Instances**

| Base address | Peripheral | Instance | Description                 | Configuration |
|--------------|------------|----------|-----------------------------|---------------|
| 0x40003000   | TWIM       | TWIM0    | Two-wire interface master 0 |               |
| 0x40004000   | TWIM       | TWIM1    | Two-wire interface master 1 |               |

### Table 75: Register Overview

| Register         | Offset | Description                                                                                       |
|------------------|--------|---------------------------------------------------------------------------------------------------|
| TASKS_STARTRX    | 0x000  | Start TWI receive sequence                                                                        |
| TASKS_STARTTX    | 0x008  | Start TWI transmit sequence                                                                       |
| TASKS_STOP       | 0x014  | Stop TWI transaction. Must be issued while the TWI master is not suspended.                       |
| TASKS_SUSPEND    | 0x01C  | Suspend TWI transaction                                                                           |
| TASKS_RESUME     | 0x020  | Resume TWI transaction                                                                            |
| EVENTS_STOPPED   | 0x104  | TWI stopped                                                                                       |
| EVENTS_ERROR     | 0x124  | TWI error                                                                                         |
| EVENTS_SUSPENDED | 0x148  | Last byte has been sent out after the SUSPEND task has been issued, TWI traffic is now suspended. |
| EVENTS_RXSTARTED | 0x14C  | Receive sequence started                                                                          |
| EVENTS_TXSTARTED | 0x150  | Transmit sequence started                                                                         |
| EVENTS_LASTRX    | 0x15C  | Byte boundary, starting to receive the last byte                                                  |
| EVENTS_LASTTX    | 0x160  | Byte boundary, starting to transmit the last byte                                                 |
| SHORTS           | 0x200  | Shortcut register                                                                                 |
| INTEN            | 0x300  | Enable or disable interrupt                                                                       |
| INTENSET         | 0x304  | Enable interrupt                                                                                  |
| INTENCLR         | 0x308  | Disable interrupt                                                                                 |
| ERRORSRC         | 0x4C4  | Error source                                                                                      |
| ENABLE           | 0x500  | Enable TWIM                                                                                       |
| PSEL_SCL         | 0x508  | Pin select for SCL signal                                                                         |
| PSEL_SDA         | 0x50C  | Pin select for SDA signal                                                                         |
| FREQUENCY        | 0x524  | TWI frequency                                                                                     |
| RXD_PTR          | 0x534  | Data pointer                                                                                      |
| RXD_MAXCNT       | 0x538  | Maximum number of bytes in receive buffer                                                         |
| RXD_AMOUNT       | 0x53C  | Number of bytes transferred in the last transaction                                               |
| RXD_LIST         | 0x540  | EasyDMA list type                                                                                 |
| TXD_PTR          | 0x544  | Data pointer                                                                                      |
| TXD_MAXCNT       | 0x548  | Maximum number of bytes in transmit buffer                                                        |
| TXD_AMOUNT       | 0x54C  | Number of bytes transferred in the last transaction                                               |
| TXD_LIST         | 0x550  | EasyDMA list type                                                                                 |
| ADDRESS          | 0x588  | Address used in the TWI transfer                                                                  |

  ## 33.9 Electrical specification

### 33.9.1 TWIM interface electrical specifications

| Symbol                     | Description                                                                   | Min. | Typ.                         | Max. | Units |
|----------------------------|-------------------------------------------------------------------------------|------|------------------------------|------|-------|
| f <sub>TWIM</sub>          | Bit rates for TWIM <sup>30</sup>                                              | 100  |                              | 400  | kbps  |
| I <sub>TWIM,100kbps</sub>  | Run current for TWIM, 100 kbps                                                |      | 50                           |      | μA    |
| I <sub>TWIM,400kbps</sub>  | Run current for TWIM, 400 kbps                                                |      | 50                           |      | μA    |
| t <sub>TWIM,START,LP</sub> | Time from STARTRX/STARTTX task to transmission started, Low power mode        |      | t <sub>TWIM,START</sub><br>+ |      | μs    |
| t <sub>TWIM,START,CL</sub> | Time from STARTRX/STARTTX task to transmission started, Constant latency mode |      | 1.5                          |      | μs    |

<sup>30</sup> Higher bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see GPIO chapter for more details.

### 33.9.2 Two Wire Interface Master (TWIM) timing specifications

| Symbol                     | Description                                                            | Min.  | Typ. | Max. | Units |
|----------------------------|------------------------------------------------------------------------|-------|------|------|-------|
| $f_{TWIM,SCL,100kbps}$     | SCL clock frequency, 100 kbps                                          |       | 100  |      | kHz   |
| $f_{TWIM,SCL,250kbps}$     | SCL clock frequency, 250 kbps                                          |       | 250  |      | kHz   |
| $f_{TWIM,SCL,400kbps}$     | SCL clock frequency, 400 kbps                                          |       | 400  |      | kHz   |
| $t_{TWIM,SU\_DAT}$         | Data setup time before positive edge on SCL – all modes                | 300   |      |      | ns    |
| $t_{TWIM,HD\_DAT}$         | Data hold time after negative edge on SCL – all modes                  | 500   |      |      | ns    |
| $t_{TWIM,HD\_STA,100kbps}$ | TWIM master hold time for START and repeated START condition, 100 kbps | 10000 |      |      | ns    |
| $t_{TWIM,HD\_STA,250kbps}$ | TWIM master hold time for START and repeated START condition, 250kbps  | 4000  |      |      | ns    |
| $t_{TWIM,HD\_STA,400kbps}$ | TWIM master hold time for START and repeated START condition, 400 kbps | 2500  |      |      | ns    |
| $t_{TWIM,SU\_STO,100kbps}$ | TWIM master setup time from SCL high to STOP condition, 100 kbps       | 5000  |      |      | ns    |
| $t_{TWIM,SU\_STO,250kbps}$ | TWIM master setup time from SCL high to STOP condition, 250 kbps       | 2000  |      |      | ns    |
| $t_{TWIM,SU\_STO,400kbps}$ | TWIM master setup time from SCL high to STOP condition, 400 kbps       | 1250  |      |      | ns    |
| $t_{TWIM,BUF,100kbps}$     | TWIM master bus free time between STOP and START conditions, 100 kbps  | 5800  |      |      | ns    |
| $t_{TWIM,BUF,250kbps}$     | TWIM master bus free time between STOP and START conditions, 250 kbps  | 2700  |      |      | ns    |
| $t_{TWIM,BUF,400kbps}$     | TWIM master bus free time between STOP and START conditions, 400 kbps  | 2100  |      |      | ns    |

Figure 84: TWIM timing diagram, 1 byte transaction

Figure 85: Recommended TWIM pullup value vs. line capacitance

- The I2C specification allows a line capacitance of 400 pF at most.
- The nRF52832 internal pullup has a fixed value of typ. 13 kOhm, see  $R_{PU}$  in the GPIO chapter.

## 34 TWIS — I<sup>2</sup>C compatible two-wire interface slave with EasyDMA

TWI slave with EasyDMA (TWIS) is compatible with I<sup>2</sup>C operating at 100 kHz and 400 kHz. The TWI transmitter and receiver implement EasyDMA.

### Figure 86: TWI slave with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see [Figure 87: A typical TWI setup comprising one master and three slaves](#) on page 319. TWIS is only able to operate with a single master on the TWI bus.

**Figure 87: A typical TWI setup comprising one master and three slaves**

The TWI slave state machine is illustrated in [Figure 88: TWI slave state machine](#) on page 320 and [Table 76: TWI slave state machine symbols](#) on page 320 is explaining the different symbols used in the state machine.

Figure 88: TWI slave state machine

Table 76: TWI slave state machine symbols

| Symbol           | Type         | Description                                                                                                                    |
|------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------|
| ENABLE           | Register     | The TWI slave has been enabled via the <a href="#">ENABLE</a> register                                                         |
| PREPARETX        | Task         | The <a href="#">TASKS_PREPARETX</a> task has been triggered                                                                    |
| STOP             | Task         | The <a href="#">TASKS_STOP</a> task has been triggered                                                                         |
| PREPARERX        | Task         | The <a href="#">TASKS_PREPARERX</a> task has been triggered                                                                    |
| STOPPED          | Event        | The <a href="#">EVENTS_STOPPED</a> event was generated                                                                         |
| RXSTARTED        | Event        | The <a href="#">EVENTS_RXSTARTED</a> event was generated                                                                       |
| TXSTARTED        | Event        | The <a href="#">EVENTS_TXSTARTED</a> event was generated                                                                       |
| TX prepared      | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARETX</a> task has been triggered. This flag is not visible to the user. |
| RX prepared      | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARERX</a> task has been triggered. This flag is not visible to the user. |
| Unprepare TX     | Internal     | Clears the internal 'TX prepared' flag until next <a href="#">TASKS_PREPARETX</a> task.                                        |
| Unprepare RX     | Internal     | Clears the internal 'RX prepared' flag until next <a href="#">TASKS_PREPARERX</a> task.                                        |
| Stop sequence    | TWI protocol | A TWI stop sequence was detected                                                                                               |
| Restart sequence | TWI protocol | A TWI restart sequence was detected                                                                                            |

The TWI slave supports clock stretching performed by the master.

The TWI slave operates in a low power mode while waiting for a TWI master to initiate a transfer. As long as the TWI slave is not addressed, it will remain in this low power mode.

To secure correct behaviour of the TWI slave, PSEL.SCL, PSEL.SDA, CONFIG and the ADDRESS[n] registers, must be configured prior to enabling the TWI slave through the ENABLE register. Similarly, changing these settings must be performed while the TWI slave is disabled. Failing to do so may result in unpredictable behaviour.

## 34.1 Shared resources

The TWI slave shares registers and other resources with other peripherals that have the same ID as the TWI slave.

Therefore, you must disable all peripherals that have the same ID as the TWI slave before the TWI slave can be configured and used. Disabling a peripheral that has the same ID as the TWI slave will not reset any of the registers that are shared with the TWI slave. It is therefore important to configure all relevant registers explicitly to secure that the TWI slave operates correctly.

The Instantiation table in [Instantiation](#) on page 24 shows which peripherals have the same ID as the TWI slave.

## 34.2 EasyDMA

The TWI slave implements EasyDMA for reading and writing to and from the RAM.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

## 34.3 TWI slave responding to a read command

Before the TWI slave can respond to a read command the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled the TWI slave will be in its IDLE state where it will consume  $I_{IDLE}$ .

A read command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the TWI slave.

The TWI slave is able to listen for up to two addresses at the same time. Which addresses to listen for is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the read command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a READ event when it acknowledges the read command.

The TWI slave is only able to detect a read command from the IDLE state.

The TWI slave will set an internal 'TX prepared' flag when the PREPARETX task is triggered.

When the read command is received the TWI slave will enter the TX state if the internal 'TX prepared' flag is set.

If the internal 'TX prepared' flag is not set when the read command is received, the TWI slave will stretch the master's clock until the PREPARETX task is triggered and the internal 'TX prepared' flag is set.

The TWI slave will generate the TXSTARTED event and clear the 'TX prepared' flag ('unprepare TX') when it enters the TX state. In this state the TWI slave will send the data bytes found in the transmit buffer to the master using the master's clock. The TWI slave will consume  $I_{TX}$  in this mode.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the TX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the 'TX prepared' flag ('unprepare TX') and go back to the IDLE state when it has stopped.

The transmit buffer is located in RAM at the address specified in the TXD.PTR register. The TWI slave will only be able to send TXD.MAXCNT bytes from the transmit buffer for each transaction. If the TWI master

forces the slave to send more than TXD.MAXCNT bytes, the slave will send the byte specified in the ORC register to the master instead. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see TXD.PTR etc., are latched when the TXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the 'TX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 324.

Each byte sent from the slave will be followed by an ACK/NACK bit sent from the master. The TWI master will generate a NACK following the last byte that it wants to receive to tell the slave to release the bus so that the TWI master can generate the stop condition. The TXD.AMOUNT register can be queried after a transaction to see how many bytes were sent.

A typical TWI slave read command response is illustrated in [Figure 89: The TWI slave responding to a read command](#) on page 322. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

**Figure 89: The TWI slave responding to a read command**

## 34.4 TWI slave responding to a write command

Before the TWI slave can respond to a write command the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled the TWI slave will be in its IDLE state where it will consume I<sub>IDLE</sub>.

A write command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the slave.

The TWI slave is able to listen for up to two addresses at the same time. Which addresses to listen for is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the write command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a WRITE event if it acknowledges the write command.

The TWI slave is only able to detect a write command from the IDLE state.

The TWI slave will set an internal 'RX prepared' flag when the PREPARERX task is triggered.

When the write command is received the TWI slave will enter the RX state if the internal 'RX prepared' flag is set.

If the internal 'RX prepared' flag is not set when the write command is received, the TWI slave will stretch the master's clock until the PREPARERX task is triggered and the internal 'RX prepared' flag is set.

The TWI slave will generate the RXSTARTED event and clear the internal 'RX prepared' flag ('unprepare RX') when it enters the RX state. In this state the TWI slave will be able to receive the bytes sent by the TWI master. The TWI slave will consume I<sub>RX</sub> in this mode.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the RX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the internal 'RX prepared' flag ('unprepare RX') and go back to the IDLE state when it has stopped.

The receive buffer is located in RAM at the address specified in the TXD.PTR register. The TWI slave will only be able to receive as many bytes as specified in the RXD.MAXCNT register. If the TWI master tries to send more bytes to the slave than the slave is able to receive, these bytes will be discarded and the bytes will be NACKed by the slave. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see RXD.PTR etc., are latched when the RXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the internal 'RX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 324.

The TWI slave will generate an ACK after every byte received from the master. The RXD.AMOUNT register can be queried after a transaction to see how many bytes were received.

A typical TWI slave write command response is illustrated in [Figure 90: The TWI slave responding to a write command](#) on page 323. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

**Figure 90: The TWI slave responding to a write command**

## 34.5 Master repeated start sequence

An example of a repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave.

This is illustrated in [Figure 91: A repeated start sequence, where the TWI master writes two bytes followed by reading four bytes from the slave](#) on page 324.

It is here assumed that the receiver does not know in advance what the master wants to read, and that this information is provided in the first two bytes received in the write part of the repeated start sequence. To guarantee that the CPU is able to process the received data before the TWI slave starts to reply to the read command, the SUSPEND task is triggered via a shortcut from the READ event generated when the read command is received. When the CPU has processed the incoming data and prepared the correct data response, the CPU will resume the transaction by triggering the RESUME task.

**Figure 91: A repeated start sequence, where the TWI master writes two bytes followed by reading four bytes from the slave**

## 34.6 Terminating an ongoing TWI transaction

In some situations, e.g. if the external TWI master is not responding correctly, it may be required to terminate an ongoing transaction.

This can be achieved by triggering the STOP task. In this situation a STOPPED event will be generated when the TWI has stopped independent of whether or not a STOP condition has been generated on the TWI bus. The TWI slave will release the bus when it has stopped and go back to its IDLE state.

## 34.7 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

## 34.8 Slave mode pin configuration

The SCL and SDA signals associated with the TWI slave are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI slave is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL and PSEL.SDA must only be configured when the TWI slave is disabled.

To secure correct signal levels on the pins used by the TWI slave when the system is in OFF mode, and when the TWI slave is disabled, these pins must be configured in the GPIO peripheral as described in [Table 77: GPIO configuration before enabling peripheral](#) on page 324.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

**Table 77: GPIO configuration before enabling peripheral**

| TWI slave signal | TWI slave pin            | Direction | Output value   | Drive strength |
|------------------|--------------------------|-----------|----------------|----------------|
| SCL              | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA              | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

## 34.9 Registers

Table 78: Instances

| Base address | Peripheral | Instance | Description                | Configuration |
|--------------|------------|----------|----------------------------|---------------|
| 0x40003000   | TWIS       | TWIS0    | Two-wire interface slave 0 |               |
| 0x40004000   | TWIS       | TWIS1    | Two-wire interface slave 1 |               |

Table 79: Register Overview

| Register         | Offset | Description                                                                             |
|------------------|--------|-----------------------------------------------------------------------------------------|
| TASKS_STOP       | 0x014  | Stop TWI transaction                                                                    |
| TASKS_SUSPEND    | 0x01C  | Suspend TWI transaction                                                                 |
| TASKS_RESUME     | 0x020  | Resume TWI transaction                                                                  |
| TASKS_PREPARERX  | 0x030  | Prepare the TWI slave to respond to a write command                                     |
| TASKS_PREPARETX  | 0x034  | Prepare the TWI slave to respond to a read command                                      |
| EVENTS_STOPPED   | 0x104  | TWI stopped                                                                             |

| t <sub>TWIS,START,CL</sub> | Time from PREPARERX/PREPARETX task to ready to receive/transmit, Constant latency mode |      | 1.5                            |      | μs    |

### 34.10.2 TWIS slave timing specifications

| Symbol                           | Description                                                                 | Min. | Typ. | Max. | Units |
|----------------------------------|-----------------------------------------------------------------------------|------|------|------|-------|
| f <sub>TWIS,SCL,400kbps</sub>    | SCL clock frequency, 400 kbps                                               |      |      | 400  | kHz   |
| t <sub>TWIS,SU_DAT</sub>         | Data setup time before positive edge on SCL – all modes                     | 300  |      |      | ns    |
| t <sub>TWIS,HD_DAT</sub>         | Data hold time after negative edge on SCL – all modes                       | 500  |      |      | ns    |
| t <sub>TWIS,HD_STA,100kbps</sub> | TWI slave hold time from for START condition (SDA low to SCL low), 100 kbps | 5200 |      |      | ns    |
| t <sub>TWIS,HD_STA,400kbps</sub> | TWI slave hold time from for START condition (SDA low to SCL low), 400 kbps | 1300 |      |      | ns    |

<sup>31</sup> Higher bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see GPIO chapter for more details.

| Symbol                                   | Description                                                         | Min. | Typ. | Max. | Units |
|------------------------------------------|---------------------------------------------------------------------|------|------|------|-------|
| $t_{\text{TWIS,SU\_STO},100\text{kbps}}$ | TWI slave setup time from SCL high to STOP condition, 100 kbps      | 5200 |      |      | ns    |
| $t_{\text{TWIS,SU\_STO},400\text{kbps}}$ | TWI slave setup time from SCL high to STOP condition, 400 kbps      | 1300 |      |      | ns    |
| $t_{\text{TWIS,BUF},100\text{kbps}}$     | TWI slave bus free time between STOP and START conditions, 100 kbps |      | 4700 |      | ns    |
| $t_{\text{TWIS,BUF},400\text{kbps}}$     | TWI slave bus free time between STOP and START conditions, 400 kbps |      | 1300 |      | ns    |

Figure 92: TWIS timing diagram, 1 byte transaction

## 35 UARTE — Universal asynchronous receiver/ transmitter with EasyDMA

The Universal asynchronous receiver/transmitter with EasyDMA (UARTE) offers fast, full-duplex, asynchronous serial communication with built-in flow control (CTS, RTS) support in hardware at a rate up to 1 Mbps, and EasyDMA data transfer from/to RAM.

Listed here are the main features for UARTE:

- Full-duplex operation
- Automatic hardware flow control
- Parity checking and generation for the 9<sup>th</sup> data bit
- EasyDMA
- Up to 1 Mbps baudrate
- Return to IDLE between transactions supported (when using HW flow control)
- One stop bit
- Least significant bit (LSB) first

**Figure 93: UARTE configuration**

The GPIOs used for each UART interface can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

### 35.1 Shared resources

The UARTE shares registers and other resources with other peripherals that have the same ID as the UARTE.

Therefore, you must disable all peripherals that have the same ID as the UARTE before the UARTE can be configured and used. Disabling a peripheral that has the same ID as the UARTE will not reset any of the registers that are shared with the UARTE. It is therefore important to configure all relevant UARTE registers explicitly to ensure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 24 for details on peripherals and their IDs.

### 35.2 EasyDMA

The UARTE implements EasyDMA for reading and writing to and from the RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The ENDRX/ENDTX event indicates that EasyDMA has finished accessing respectively the RX/TX buffer in RAM.

### 35.3 Transmission

The first step of a DMA transmission is storing bytes in the transmit buffer and configuring EasyDMA. This is achieved by writing the initial address pointer to TXD.PTR, and the number of bytes in the RAM buffer to TXD.MAXCNT. The UARTE transmission is started by triggering the STARTTX task.

After each byte has been sent over the TXD line, a TXDRDY event will be generated.

When all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have been transmitted, the UARTE transmission will end automatically and an ENDTX event will be generated.

A UARTE transmission sequence is stopped by triggering the STOPTX task, a TXSTOPPED event will be generated when the UARTE transmitter has stopped.

If the ENDTX event has not already been generated when the UARTE transmitter has come to a stop, the UARTE will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

If flow control is enabled, a transmission will be automatically suspended when CTS is deactivated and resumed when CTS is activated again, as illustrated in [Figure 94: UARTE transmission](#) on page 334. A byte that is in transmission when CTS is deactivated will be fully transmitted before the transmission is suspended.

**Figure 94: UARTE transmission**

The UARTE transmitter will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTTX or after it has been stopped via STOPTX and the TXSTOPPED event has been generated. See [POWER — Power supply](#) on page 78 for more information about power modes.

### 35.4 Reception

The UARTE receiver is started by triggering the STARTRX task. The UARTE receiver is using EasyDMA to store incoming data in an RX buffer in RAM.

The RX buffer is located at the address specified in the RXD.PTR register. The RXD.PTR register is double-buffered and it can be updated and prepared for the next STARTRX task immediately after the RXSTARTED event is generated. The size of the RX buffer is specified in the RXD.MAXCNT register and the UARTE will generate an ENDRX event when it has filled up the RX buffer, see [Figure 95: UARTE reception](#) on page 335.

For each byte received over the RXD line, an RXDRDY event will be generated. This event is likely to occur before the corresponding data has been transferred to Data RAM.

The RXD.AMOUNT register can be queried following an ENDRX event to see how many new bytes have been transferred to the RX buffer in RAM since the previous ENDRX event.

**Figure 95: UARTE reception**

The UARTE receiver is stopped by triggering the STOPRX task. An RXTO event is generated when the UARTE has stopped. The UARTE will make sure that an impending ENDRX event will be generated before the RXTO event is generated. This means that the UARTE will guarantee that no ENDRX event will be generated after RXTO, unless the UARTE is restarted or a FLUSHRX command is issued after the RXTO event is generated.

**Important:** If the ENDRX event has not already been generated when the UARTE receiver has come to a stop, which implies that all pending content in the RX FIFO has been moved to the RX buffer, the UARTE will generate the ENDRX event explicitly even though the RX buffer is not full. In this scenario the ENDRX event will be generated before the RXTO event is generated.

To be able to know how many bytes have actually been received into the RX buffer, the CPU can read the RXD.AMOUNT register following the ENDRX event or the RXTO event.

The UARTE is able to receive up to four bytes after the STOPRX task has been triggered as long as these are sent in succession immediately after the RTS signal is deactivated. This is possible because after the RTS is deactivated the UARTE is able to receive bytes for an extended period equal to the time it takes to send 4 bytes on the configured baud rate.

After the RXTO event is generated the internal RX FIFO may still contain data, and to move this data to RAM the FLUSHRX task must be triggered. To make sure that this data does not overwrite data in the RX buffer, the RX buffer should be emptied or the RXD.PTR should be updated before the FLUSHRX task is triggered.

To make sure that all data in the RX FIFO is moved to the RX buffer, the RXD.MAXCNT register must be set to  $RXD.MAXCNT > 4$ , see [Figure 96: UARTE reception with forced stop via STOPRX](#) on page 336. The UARTE will generate the ENDRX event after completing the FLUSHRX task even if the RX FIFO was empty or if the RX buffer does not get filled up. To be able to know how many bytes have actually been received into the RX buffer in this case, the CPU can read the RXD.AMOUNT register following the ENDRX event.

**Figure 96: UARTE reception with forced stop via STOPRX**

If HW flow control is enabled the RTS signal will be deactivated when the receiver is stopped via the STOPRX task or when the UARTE is only able to receive four more bytes in its internal RX FIFO.

With flow control disabled, the UARTE will function in the same way as when the flow control is enabled except that the RTS line will not be used. This means that no signal will be generated when the UARTE has reached the point where it is only able to receive four more bytes in its internal RX FIFO. Data received when the internal RX FIFO is filled up, will be lost.

The UARTE receiver will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTRX or after it has been stopped via STOPRX and the RXTO event has been generated. See [POWER — Power supply](#) on page 78 for more information about power modes.

## 35.5 Error conditions

An ERROR event, in the form of a framing error, will be generated if a valid stop bit is not detected in a frame. Another ERROR event, in the form of a break condition, will be generated if the RXD line is held active low for longer than the length of a data frame. Effectively, a framing error is always generated before a break condition occurs.

An ERROR event will not stop reception. If the error was a parity error, the received byte will still be transferred into Data RAM, and so will following incoming bytes. If there was a framing error (wrong stop bit), that specific byte will NOT be stored into Data RAM, but following incoming bytes will.

## 35.6 Using the UARTE without flow control

If flow control is not enabled, the interface will behave as if the CTS and RTS lines are kept active all the time.

## 35.7 Parity configuration

When parity is enabled, the parity will be generated automatically from the even parity of TXD and RXD for transmission and reception respectively.

## 35.8 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOPTX and STOPRX tasks may not be always needed (the peripheral might already be stopped), but if STOPTX and/or STOPRX is sent, software shall wait until the TXSTOPPED and/or RXTO event is received in response, before disabling the peripheral through the ENABLE register.

## 35.9 Pin configuration

The different signals RXD, CTS (Clear To Send, active low), RTS (Request To Send, active low), and TXD associated with the UARTE are mapped to physical pins according to the configuration specified in the PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers respectively.

The PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers and their configurations are only used as long as the UARTE is enabled, and retained only for the duration the device is in ON mode. PSEL.RXD, PSEL.RTS, PSEL.RTS and PSEL.TXD must only be configured when the UARTE is disabled.

To secure correct signal levels on the pins by the UARTE when the system is in OFF mode, the pins must be configured in the GPIO peripheral as described in [Table 80: GPIO configuration before enabling peripheral](#) on page 337.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

**Table 80: GPIO configuration before enabling peripheral**

| UARTE signal | UARTE pin                | Direction | Output value   |
|--------------|--------------------------|-----------|----------------|
| RXD          | As specified in PSEL.RXD | Input     | Not applicable |
| CTS          | As specified in PSEL.CTS | Input     | Not applicable |
| RTS          | As specified in PSEL.RTS | Output    | 1              |
| TXD          | As specified in PSEL.TXD | Output    | 1              |

## 35.10 Registers

**Table 81: Instances**

| Base address | Peripheral | Instance | Description                                                  | Configuration |
|--------------|------------|----------|--------------------------------------------------------------|---------------|
| 0x40002000   | UARTE      | UARTE0   | Universal Asynchronous Receiver/<br>Transmitter with EasyDMA |               |

**Table 82: Register Overview**

| Register         | Offset | Description                                                            |
|------------------|--------|------------------------------------------------------------------------|
| TASKS_STARTRX    | 0x000  | Start UART receiver                                                    |
| TASKS_STOPRX     | 0x004  | Stop UART receiver                                                     |
| TASKS_STARTTX    | 0x008  | Start UART transmitter                                                 |
| TASKS_STOPTX     | 0x00C  | Stop UART transmitter                                                  |
| TASKS_FLUSHRX    | 0x02C  | Flush RX FIFO into RX buffer                                           |
| EVENTS_CTS       | 0x100  | CTS is activated (set low). Clear To Send.                             |
| EVENTS_NCTS      | 0x104  | CTS is deactivated (set high). Not Clear To Send.                      |
| EVENTS_RXDRDY    | 0x108  | Data received in RXD (but potentially not yet transferred to Data RAM) |
| EVENTS_ENDRX     | 0x110  | Receive buffer is filled up                                            |
| EVENTS_TXDRDY    | 0x11C  | Data sent from TXD                                                     |
| EVENTS_ENDTX     | 0x120  | Last TX byte transmitted                                               |
| EVENTS_ERROR     | 0x124  | Error detected                                                         |
| EVENTS_RXTO      | 0x144  | Receiver timeout                                                       |
| EVENTS_RXSTARTED | 0x14C  | UART receiver has started                                              |
| EVENTS_TXSTARTED | 0x150  | UART transmitter has started                                           |
| EVENTS_TXSTOPPED | 0x158  | Transmitter stopped                                                    |
| <i>SHORTS</i>    | 0x200  | Shortcut register                                                      |
| <i>INTEN</i>     | 0x300  | Enable or disable interrupt                                            |
| <i>INTENSET</i>  | 0x304  | Enable interrupt                                                       |
| <i>INTENCLR</i>  | 0x308  | Disable interrupt                                                      |

| Register          | Offset | Description                                               |
|-------------------|--------|-----------------------------------------------------------|
| <i>ERRORSRC</i>   | 0x480  | Error source                                              |
| <i>ENABLE</i>     | 0x500  | Enable UART                                               |
| <i>PSEL.RTS</i>   | 0x508  | Pin select for RTS signal                                 |
| <i>PSEL.TXD</i>   | 0x50C  | Pin select for TXD signal                                 |
| <i>PSEL.CTS</i>   | 0x510  | Pin select for CTS signal                                 |
| <i>PSEL.RXD</i>   | 0x514  | Pin select for RXD signal                                 |
| <i>BAUDRATE</i>   | 0x524  | Baud rate. Accuracy depends on the HFCLK source selected. |
| <i>RXD.PTR</i>    | 0x534  | Data pointer                                              |
| <i>RXD.MAXCNT</i> | 0x538  | Maximum number of bytes in receive buffer                 |
| <i>RXD.AMOUNT</i> | 0x53C  | Number of bytes transferred in the last transaction       |
| <i>TXD.PTR</i>    | 0x544  | Data pointer                                              |
| <i>TXD.MAXCNT</i> | 0x548  | Maximum number of bytes in transmit buffer                |
| <i>TXD.AMOUNT</i> | 0x54C  | Number of bytes transferred in the last transaction       |
| <i>CONFIG</i>     | 0x56C  | Configuration of parity and hardware flow control         |

## 36 QDEC — Quadrature decoder

The Quadrature decoder (QDEC) provides buffered decoding of quadrature-encoded sensor signals. It is suitable for mechanical and optical sensors.

The sample period and accumulation are configurable to match application requirements. The QDEC provides the following:

- Decoding of digital waveform from off-chip quadrature encoder.
- Sample accumulation eliminating hard real-time requirements to be enforced on application.
- Optional input de-bounce filters.
- Optional LED output signal for optical encoders.

Figure 97: Quadrature decoder configuration

### 36.1 Sampling and decoding

The QDEC decodes the output from an incremental motion encoder by sampling the QDEC phase input pins (A and B).

The off-chip quadrature encoder is an incremental motion encoder outputting two waveforms, phase A and phase B. The two output waveforms are always 90 degrees out of phase, meaning that one always changes level before the other. The direction of movement is indicated by which of these two waveforms that changes level first. Invalid transitions may occur, that is when the two waveforms switch simultaneously. This may occur if the wheel rotates too fast relative to the sample rate set for the decoder.

The QDEC decodes the output from the off-chip encoder by sampling the QDEC phase input pins (A and B) at a fixed rate as specified in the SAMPLEPER register.

If the SAMPLEPER value needs to be changed, the QDEC shall be stopped using the STOP task. SAMPLEPER can be then changed upon receiving the STOPPED event, and QDEC can be restarted using the START task. Failing to do so may result in unpredictable behaviour.

It is good practice to change other registers (LEDPOL, REPORTPER, DBFEN and LEDPRE) only when the QDEC is stopped.

When started, the decoder continuously samples the two input waveforms and decodes these by comparing the current sample pair (n) with the previous sample pair (n-1).

The decoding of the sample pairs is described in the table below.

**Table 83: Sampled value encoding**

| Previous sample pair(n-1) |   | Current samples pair(n) |   | SAMPLE register | ACC operation | ACCDL operation | Description                    |
|---------------------------|---|-------------------------|---|-----------------|---------------|-----------------|--------------------------------|
| A                         | B | A                       | B |                 |               |                 |                                |
| 0                         | 0 | 0                       | 0 | 0               | No change     | No change       | No movement                    |
| 0                         | 0 | 0                       | 1 | 1               | Increment     | No change       | Movement in positive direction |

| 1                         | 1 | 1                       | 1 | 0               | No change     | No change       | No movement                    |

## 36.2 LED output

The LED output follows the sample period, and the LED is switched on a given period before sampling and switched off immediately after the inputs are sampled. The period the LED is switched on before sampling is given in the LEDPRE register.

The LED output pin polarity is specified in the LEDPOL register.

For using off-chip mechanical encoders not requiring a LED, the LED output can be disabled by writing value 'Disconnected' to the CONNECT field of the PSEL.LED register. In this case the QDEC will not acquire access to a LED output pin and the pin can be used for other purposes by the CPU.

## 36.3 Debounce filters

Each of the two-phase inputs have digital debounce filters.

When enabled through the DBFEN register, the filter inputs are sampled at a fixed 1 MHz frequency during the entire sample period (which is specified in the SAMPLEPER register), and the filters require all of the samples within this sample period to equal before the input signal is accepted and transferred to the output of the filter.

As a result, only input signal with a steady state longer than twice the period specified in SAMPLEPER are guaranteed to pass through the filter, and any signal with a steady state shorter than SAMPLEPER will always be suppressed by the filter. (This is assumed that the frequency during the debounce period never exceeds 500 kHz (as required by the Nyquist theorem when using a 1 MHz sample frequency).

The LED will always be ON when the debounce filters are enabled, as the inputs in this case will be sampled continuously.

Note that when the debounce filters are enabled, displacements reported by the QDEC peripheral are delayed by one SAMPLEPER period.

## 36.4 Accumulators

The quadrature decoder contains two accumulator registers, ACC and ACCDBL, that accumulate respectively valid motion sample values and the number of detected invalid samples (double transitions).

The ACC register will accumulate all valid values (1/-1) written to the SAMPLE register. This can be useful for preventing hard real-time requirements from being enforced on the application. When using the ACC register the application does not need to read every single sample from the SAMPLE register, but can instead fetch the ACC register whenever it fits the application. The ACC register will always hold the relative movement of the external mechanical device since the previous clearing of the ACC register. Sample values indicating a double transition (2) will not be accumulated in the ACC register.

An ACCOF event will be generated if the ACC receives a SAMPLE value that would cause the register to overflow or underflow. Any SAMPLE value that would cause an ACC overflow or underflow will be discarded, but any samples not causing the ACC to overflow or underflow will still be accepted.

The accumulator ACCDBL accumulates the number of detected double transitions since the previous clearing of the ACCDBL register.

The ACC and ACCDBL registers can be cleared by the READCLRACC and subsequently read using the ACCREAD and ACCDBLREAD registers.

The ACC register can be separately cleared by the RDCLRACC and subsequently read using the ACCREAD registers.

The ACCDBL register can be separately cleared by the RDCLRDBL and subsequently read using the ACCDBLREAD registers.

The REPORTPER register allows automating the capture of several samples before it can send out a REPORTRDY event in case a non-null displacement has been captured and accumulated, and a DBLRDY event in case one or more double-displacements have been captured and accumulated. The REPORTPER field in this register selects after how many samples the accumulators contents are evaluated to send (or not) REPORTRDY and DBLRDY events.

Using the RDCLRACC task (manually sent upon receiving the event, or using the DBLRDY\_RDCLRACC shortcut), ACCREAD can then be read.

In case at least one double transition has been captured and accumulated, a DBLRDY event is sent. Using the RDCLRDBL task (manually sent upon receiving the event, or using the DBLRDY\_RDCLRDBL shortcut), ACCDBLREAD can then be read.

## 36.5 Output/input pins

The QDEC uses a three-pin interface to the off-chip quadrature encoder.

These pins will be acquired when the QDEC is enabled in the ENABLE register. The pins acquired by the QDEC cannot be written by the CPU, but they can still be read by the CPU.

The pin numbers to be used for the QDEC are selected using the PSEL.n registers.

## 36.6 Pin configuration

The Phase A, Phase B, and LED signals are mapped to physical pins according to the configuration specified in the PSEL.A, PSEL.B, and PSEL.LED registers respectively.

If the CONNECT field value 'Disconnected' is specified in any of these registers, the associated signal will not be connected to any physical pin. The PSEL.A, PSEL.B, and PSEL.LED registers and their configurations are only used as long as the QDEC is enabled, and retained only as long as the device is in

ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register.

To secure correct behavior in the QDEC, the pins used by the QDEC must be configured in the GPIO peripheral as described in [Table 84: GPIO configuration before enabling peripheral](#) on page 350 before enabling the QDEC. This configuration must be retained in the GPIO for the selected IOs as long as the QDEC is enabled.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

**Table 84: GPIO configuration before enabling peripheral**

| QDEC signal | QDEC pin                 | Direction | Output value   | Comment |
|-------------|--------------------------|-----------|----------------|---------|
| Phase A     | As specified in PSEL.A   | Input     | Not applicable |         |
| Phase B     | As specified in PSEL.B   | Input     | Not applicable |         |
| LED         | As specified in PSEL.LED | Input     | Not applicable |         |

## 36.7 Registers

**Table 85: Instances**

|                  |    |       |       |    |       | The value is a 2's complement value, and the sign gives the direction of the motion. The value '2' indicates a double transition. |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |

 | A                | R  | ACC   |       |    | [-1024..1023] | Register accumulating all valid samples (not double transition) read from the SAMPLE register                                                                                                                                                                                                                                                                         |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |  |  |  |
|                  |    |       |       |    |               | Double transitions ( SAMPLE = 2 ) will not be accumulated in this register. The value is a 32 bit 2's complement value. If a sample that would cause this register to overflow or underflow is received, the sample will be ignored and an overflow event ( ACCOF ) will be generated. The ACC register is cleared by triggering the READCLRACC or the RDCLRACC task. |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |  |  |  |

### 36.7.10 ACCREAD

Address offset: 0x518

| t <sub>LED</sub>    | Time from LED is turned on to signals are sampled     | 0    |      | 511    | μs    |

## 37 SAADC — Successive approximation analog-to-digital converter

The ADC is a differential successive approximation register (SAR) analog-to-digital converter.

Listed here are the main features of SAADC:

- 8/10/12-bit resolution, 14-bit resolution with oversampling
- Up to eight input channels
  - One channel per single-ended input and two channels per differential input
  - Scan mode can be configured with both single-ended channels and differential channels.
- Full scale input range (0 to VDD)
- Sampling triggered via a task from software or a PPI channel for full flexibility on sample frequency source from low power 32.768kHz RTC or more accurate 1/16MHz Timers
- One-shot conversion mode to sample a single channel
- Scan mode to sample a series of channels in sequence. Sample delay between channels is  $t_{\text{ack}} + t_{\text{conv}}$  which may vary between channels according to user configuration of  $t_{\text{ack}}$ .
- Support for direct sample transfer to RAM using EasyDMA
- Interrupts on single sample and full buffer events
- Samples stored as 16-bit 2's complement values for differential and single-ended sampling
- Continuous sampling without the need of an external timer
- Internal resistor string
- Limit checking on the fly

### 37.1 Shared resources

The ADC can coexist with COMP, LPCOMP and other peripherals using one of AIN0–AIN7, provided these are assigned to different pins.

It is not recommended to select the same analog input pin for both modules.

### 37.2 Overview

The ADC supports up to eight external analog input channels, depending on package variant. It can be operated in a one-shot mode with sampling under software control, or a continuous conversion mode with a programmable sampling rate.

The analog inputs can be configured as eight single-ended inputs, four differential inputs or a combination of these. Each channel can be configured to select AIN0 to AIN7 pins, or the VDD pin. Channels can be sampled individually in one-shot or continuous sampling modes, or, using scan mode, multiple channels can be sampled in sequence. Channels can also be oversampled to improve noise performance.

**Figure 98: Simplified ADC block diagram**

Internally, the ADC is always a differential analog-to-digital converter, but by default it is configured with single-ended input in the MODE field of the CH[n].CONFIG register. In single-ended mode, the negative input will be shorted to ground internally.

The assumption in single-ended mode is that the internal ground of the ADC is the same as the external ground that the measured voltage is referred to. The ADC is thus sensitive to ground bounce on the PCB in single-ended mode. If this is a concern we recommend using differential measurement.

### 37.3 Digital output

The output result of the ADC depends on the settings in the CH[n].CONFIG and RESOLUTION registers as follows:

$$\text{RESULT} = [V(P) - V(N)] * \text{GAIN}/\text{REFERENCE} * 2^{(\text{RESOLUTION} - m)}$$

where

**V(P)**

is the voltage at input P

**V(N)**

is the voltage at input N

**GAIN**

is the selected gain setting

**REFERENCE**

is the selected reference voltage

and m=0 if CONFIG.MODE=SE, or m=1 if CONFIG.MODE=Diff.

The result generated by the ADC will deviate from the expected due to DC errors like offset, gain, differential non-linearity (DNL), and integral non-linearity (INL). See [Electrical specification](#) for details on these parameters. The result can also vary due to AC errors like non-linearities in the GAIN block, settling errors due to high source impedance and sampling jitter. For battery measurement the DC errors are most noticeable.

The ADC has a wide selection of gains controlled in the GAIN field of the CH[n].CONFIG register. If CH[n].CONFIG.REFSEL=0, the input range of the ADC core is nominally  $\pm 0.6$  V differential and the input must be scaled accordingly.

The ADC has a temperature dependent offset. If the ADC is to operate over a large temperature range, we recommend running CALIBRATEOFFSET at regular intervals, a CALIBRATEDONE event will be fired when the calibration is complete

## 37.4 Analog inputs and channels

Up to eight analog input channels, CH[n](n=0..7), can be configured.

See [Shared resources](#) on page 357 for shared input with comparators.

Any one of the available channels can be enabled for the ADC to operate in one-shot mode. If more than one CH[n] is configured, the ADC enters scan mode.

An analog input is selected as a positive converter input if CH[n].PSEL is set, setting CH[n].PSEL also enables the particular channel.

An analog input is selected as a negative converter input if CH[n].PSELN is set. The CH[n].PSELN register will have no effect unless differential mode is enabled, see MODE field in CH[n].CONFIG register.

If more than one of the CH[n].PSEL registers is set, the device enters scan mode. Input selections in scan mode are controlled by the CH[n].PSEL and CH[n].PSELN registers, where CH[n].PSELN is only used if the particular scan channel is specified as differential, see MODE field in CH[n].CONFIG register.

**Important:** Channels selected for either COMP or LPCOMP cannot be used at the same time for ADC sampling, though channels not selected for use by these blocks can be used by the ADC.

**Table 87: Legal connectivity CH[n] vs. analog input**

| Channel input | Source      | Connectivity |
|---------------|-------------|--------------|
| CH[n].PSEL    | AIN0...AIN7 | Yes(any)     |
| CH[n].PSEL    | VDD         | Yes          |
| CH[n].PSELN   | AIN0...AIN7 | Yes(any)     |
| CH[n].PSELN   | VDD         | Yes          |

## 37.5 Operation modes

The ADC input configuration supports one-shot mode, continuous mode and scan mode.

Scan mode and oversampling cannot be combined.

### 37.5.1 One-shot mode

One-shot operation is configured by enabling only one of the available channels defined by CH[n].PSEL, CH[n].PSELN, and CH[n].CONFIG registers.

Upon a SAMPLE task, the ADC starts to sample the input voltage. The CH[n].CONFIG.TACQ controls the acquisition time.

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event has the same meaning as DONE when no oversampling takes place. Note that both events may occur before the actual value has been transferred into RAM by EasyDMA. For more information, see [EasyDMA](#) on page 361.

### 37.5.2 Continuous mode

Continuous sampling can be achieved by using the internal timer in the ADC, or triggering the SAMPLE task from one of the general purpose timers through the PPI.

Care shall be taken to ensure that the sample rate fulfils the following criteria, depending on how many channels are active:

$$f_{\text{SAMPLE}} < 1 / [\tau_{\text{ACQ}} + \tau_{\text{conv}}]$$

The SAMPLERATE register can be used as a local timer instead of triggering individual SAMPLE tasks. When SAMPLERATE.MODE is set to Timers, it is sufficient to trigger SAMPLE task only once in order to start the SAADC and triggering the STOP task will stop sampling. The SAMPLERATE.CC field controls the sample rate.

The SAMPLERATE timer mode cannot be combined with SCAN mode, and only one channel can be enabled in this mode.

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event has the same meaning as DONE when no oversampling takes place. Note that both events may occur before the actual value has been transferred into RAM by EasyDMA.

### 37.5.3 Oversampling

An accumulator in the ADC can be used to average noise on the analog input. In general, oversampling improves the signal-to-noise ratio (SNR). Oversampling, however, does not improve the integral non-linearity (INL), or differential non-linearity (DNL).

Oversampling and scan should not be combined, since oversampling and scan will average over input channels.

The accumulator is controlled in the OVERSAMPLE register. The SAMPLE task must be set  $2^{\text{OVERSAMPLE}}$  number of times before the result is written to RAM. This can be achieved by:

- Configuring a fixed sampling rate using the local timer or a general purpose timer and PPI to trigger a SAMPLE task
- Triggering SAMPLE  $2^{\text{OVERSAMPLE}}$  times from software
- Enabling BURST mode

CH[n].CONFIG.BURST can be enabled to avoid setting SAMPLE task  $2^{\text{OVERSAMPLE}}$  times. With BURST = 1 the ADC will sample the input  $2^{\text{OVERSAMPLE}}$  times as fast as it can (actual timing:  $< (t_{\text{ACQ}} + t_{\text{CONV}}) \times 2^{\text{OVERSAMPLE}}$ ). Thus, for the user it will just appear like the conversion took a bit longer time, but other than that, it is similar to one-shot mode. Scan mode can be combined with BURST=1, if burst is enabled on all channels.

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event signals that enough conversions have taken place for an oversampled result to get transferred into RAM. Note that both events may occur before the actual value has been transferred into RAM by EasyDMA.

### 37.5.4 Scan mode

A channel is considered enabled if CH[n].PSELP is set. If more than one channel, CH[n], is enabled, the ADC enters scan mode.

In scan mode, one SAMPLE task will trigger one conversion per enabled channel. The time it takes to sample all channels is:

```
Total time < Sum(CH[x].tACQ+tCONV), x=0..enabled channels
```

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event signals has the same meaning as DONE when no oversampling takes place. Note that both events may occur before the actual values have been transferred into RAM by EasyDMA.

*Figure 99: Example of RAM placement (even RESULT.MAXCNT), channels 1, 2 and 5 enabled* on page 361 provides an example of results placement in Data RAM, with an even RESULT.MAXCNT. In this example, channels 1, 2 and 5 are enabled, all others are disabled.

|                                    | 31                           | 16 | 15                           | 0 |

**Figure 100: Example of RAM placement (odd RESULT.MAXCNT), channels 1, 2 and 5 enabled**

## 37.6 EasyDMA

After configuring RESULT.PTR and RESULT.MAXCNT, the ADC resources are started by triggering the START task. The ADC is using EasyDMA to store results in a Result buffer in RAM.

The Result buffer is located at the address specified in the RESULT.PTR register. The RESULT.PTR register is double-buffered and it can be updated and prepared for the next START task immediately after the STARTED event is generated. The size of the Result buffer is specified in the RESULT.MAXCNT register and the ADC will generate an END event when it has filled up the Result buffer, see [Figure 101: ADC](#) on page 362. Results are stored in little-endian byte order in Data RAM. Every sample will be sign extended to 16 bit before stored in the Result buffer.

The ADC is stopped by triggering the STOP task. The STOP task will terminate an ongoing sampling. The ADC will generate a STOPPED event when it has stopped. If the ADC is already stopped when the STOP task is triggered, the STOPPED event will still be generated.

**Figure 101: ADC**

If the RESULT.PTR is not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 23 for more information about the different memory regions.

The EasyDMA will have finished accessing the RAM when the END or STOPPED event has been generated.

The RESULT.AMOUNT register can be read following an END event or a STOPPED event to see how many results have been transferred to the Result buffer in RAM since the START task was triggered.

In Scan mode, the size of the Result buffer must be large enough to have room for a minimum one result from each of the enabled channels. To secure this, RESULT.MAXCNT must be specified to RESULT.MAXCNT >= "number of channels enabled". See [Scan mode](#) on page 360 for more information about Scan mode.

## 37.7 Resistor ladder

The ADC has an internal resistor string for positive and negative input.

See [Figure 102: Resistor ladder for positive input \(negative input is equivalent, using RESN instead of RESP\)](#) on page 363. The resistors are controlled in the CH[n].CONFIG.RESP and CH[n].CONFIG.RESN registers.

**Figure 102: Resistor ladder for positive input (negative input is equivalent, using RESN instead of RESP)**

## 37.8 Reference

The ADC can use two different references, controlled in the REFSEL field of the CH[n].CONFIG register.

These are:

- Internal reference
- VDD as reference

The internal reference results in an input range of  $\pm 0.6$  V on the ADC core. VDD as reference results in an input range of  $\pm VDD/4$  on the ADC core. The gain block can be used to change the effective input range of the ADC.

$$\text{Input range} = (\pm 0.6 \text{ V or } \pm VDD/4) / \text{Gain}$$

For example, choosing VDD as reference, single ended input (grounded negative input), and a gain of 1/4 the input range will be:

$$\text{Input range} = (VDD/4) / (1/4) = VDD$$

With internal reference, single ended input (grounded negative input), and a gain of 1/6 the input range will be:

$$\text{Input range} = (0.6 \text{ V}) / (1/6) = 3.6 \text{ V}$$

The AIN0-AIN7 inputs cannot exceed VDD, or be lower than VSS.

## 37.9 Acquisition time

To sample the input voltage, the ADC connects a capacitor to the input.

For illustration, see [Figure 103: Simplified ADC sample network](#) on page 364. The acquisition time indicates how long the capacitor is connected, see TACQ field in CH[n].CONFIG register. The required acquisition time depends on the source ( $R_{\text{source}}$ ) resistance. For high source resistance the acquisition time should be increased, see [Table 88: Acquisition time](#) on page 364.

**Figure 103: Simplified ADC sample network**

**Table 88: Acquisition time**

| TACQ [ $\mu$ s] | Maximum source resistance [kOhm] |
|-----------------|----------------------------------|
| 3               | 10                               |
| 5               | 40                               |
| 10              | 100                              |
| 15              | 200                              |
| 20              | 400                              |
| 40              | 800                              |

## 37.10 Limits event monitoring

A channel can be event monitored by configuring limit register CH[n].LIMIT.

If the conversion result is higher than the defined high limit, or lower than the defined low limit, the appropriate event will get fired.

**Figure 104: Example of limits monitoring on channel 'n'**

Note that when setting the limits, CH[n].LIMIT.HIGH shall always be higher than or equal to CH[n].LIMIT.LOW. In other words, an event can be fired only when the input signal has been sampled

outside of the defined limits. It is not possible to fire an event when the input signal is inside a defined range by swapping high and low limits.

The comparison to limits always takes place, there is no need to enable it. If comparison is not required on a channel, the software shall simply ignore the related events. In that situation, the value of the limits registers is irrelevant, so it does not matter if CH[n].LIMIT.LOW is lower than CH[n].LIMIT.HIGH or not.

## 37.11 Registers

**Table 89: Instances**

| Base address | Peripheral | Instance | Description                 | Configuration |
|--------------|------------|----------|-----------------------------|---------------|
| 0x40007000   | SAADC      | SAADC    | Analog to digital converter |               |

**Table 90: Register Overview**

| Register             | Offset | Description                                                                                                                              |
|----------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------|
| TASKS_START          | 0x000  | Start the ADC and prepare the result buffer in RAM                                                                                       |
| TASKS_SAMPLE         | 0x004  | Take one ADC sample, if scan is enabled all channels are sampled                                                                         |
| TASKS_STOP           | 0x008  | Stop the ADC and terminate any on-going conversion                                                                                       |
| TASKS_CALIBRATEOFFSE | 0x00C  | Starts offset auto-calibration                                                                                                           |
| EVENTS_STARTED       | 0x100  | The ADC has started                                                                                                                      |
| EVENTS_END           | 0x104  | The ADC has filled up the Result buffer                                                                                                  |
| EVENTS_DONE          | 0x108  | A conversion task has been completed. Depending on the mode, multiple conversions might be needed for a result to be transferred to RAM. |
| EVENTS_RESULTDONE    | 0x10C  | A result is ready to get transferred to RAM.                                                                                             |
| EVENTS_CALIBRATEDON  | 0x110  | Calibration is complete                                                                                                                  |
| EVENTS_STOPPED       | 0x114  | The ADC has stopped                                                                                                                      |
| EVENTS_CH[0].LIMITH  | 0x118  | Last results is equal or above CH[0].LIMIT.HIGH                                                                                          |
| EVENTS_CH[0].LIMITL  | 0x11C  | Last results is equal or below CH[0].LIMIT.LOW                                                                                           |
| EVENTS_CH[1].LIMITH  | 0x120  | Last results is equal or above CH[1].LIMIT.HIGH                                                                                          |
| EVENTS_CH[1].LIMITL  | 0x124  | Last results is equal or below CH[1].LIMIT.LOW                                                                                           |
| EVENTS_CH[2].LIMITH  | 0x128  | Last results is equal or above CH[2].LIMIT.HIGH                                                                                          |
