

FEATURES

- Battery operation
- Minimum external parts
- Wide supply voltage range 4V to 12V
- Low quiescent current drain 4mA (Typ.)
- Voltage gains from 20 to 200
- ESD Protection 2kV
- Ground referenced input
- Self-centering output quiescent voltage
- Low distortion

APPLICATIONS

- AM-FM radio amplifier
- Portable tape player amplifiers
- Intercoms
- TV sound systems
- Line drivers
- Ultrasonic drivers
- Small servo drivers
- Power converters

LM386D	SOP-8
LM386N	DIP-8

DESCRIPTION

The LM386 is a power amplifier designed for use in low voltage consumer applications. The gain is internally set to 20 to keep external part count low, but the addition of an external resistor and capacitor between pins 1 and 8 will increase the gain to any value up to 200. The inputs are ground referenced while the output is automatically biased to one half the supply voltage. The quiescent power drain is only 24 milliwatts when operating from a 6V supply, making the LM386 ideal for battery operation.

ABSOLUTE MAXIMUM RATINGS (Note 1)

CHARACTERISTIC	SYMBOL	MIN.	MAX.	UNIT
Supply Voltage	V_{CC}	-	15	V
Input Voltage	V_{IN}	-0.4	0.4	V
Operating Ambient Temperature Range	T_A	-40	85	°C
Junction Temperature	T_J	-	125	°C

Note1. Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

RECOMMENDED OPERATING CONDITIONS (Note 2)

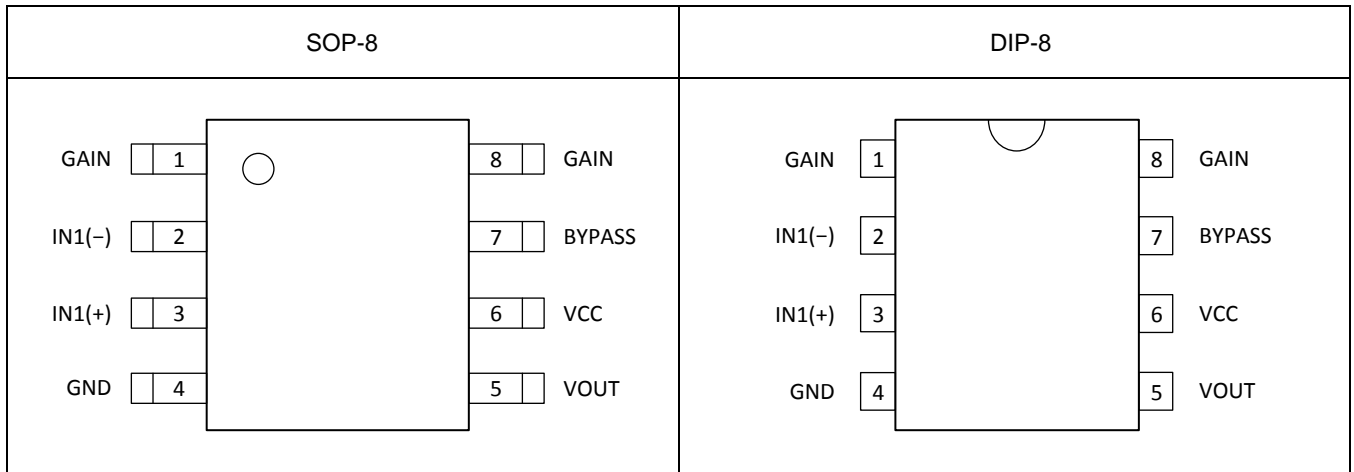

CHARACTERISTIC	SYMBOL	MIN.	MAX.	UNIT
Supply Voltage	V_{CC}	4	12	V
Operating Free-Air Temperature Range	T_A	0	70	°C

Note 2. The device is not guaranteed to function outside its operating ratings.

APPLICATION INFORMATION

The LM386 is a mono low voltage amplifier that can be used in a variety of applications. It can drive loads from 4Ω to 32Ω . The gain is internally set to 20 but it can be modified from 20 to 200 by placing a resistor and capacitor between pins 1 and 8. This device comes in three different 8-pin packages as DIP-8 and SOP-8 to fit in different applications. As this is an Op Amp it can be used in different configurations to fit in several applications. The internal gain setting resistor allows the LM386 to be used in a very low part count system. In addition, a series resistor can be placed between pins 1 and 5 to modify the gain and frequency response for specific applications.
