

## Protection IC for 1-Cell Battery Pack

### Features

- High Detection Accuracy
  - Over-charge Detection:  $\pm 25\text{mV}$
  - Over-discharge Detection:  $\pm 35\text{mV}/\pm 45\text{mV}$
  - Discharge Over-current Detection:  $\pm 10\text{mV}/\pm 15\text{mV}$
  - Charge Over-current Detection:  $\pm 20\text{mV}$
- High Withstand Voltage
  - Absolute maximum ratings: 28V (V- pin and CO pin)
- Ultra Small Package
  - SOT-23-6

### Application

- Mobile phone battery packs
- Digital camera battery packs
- Bluetooth earphone Li-ion battery module

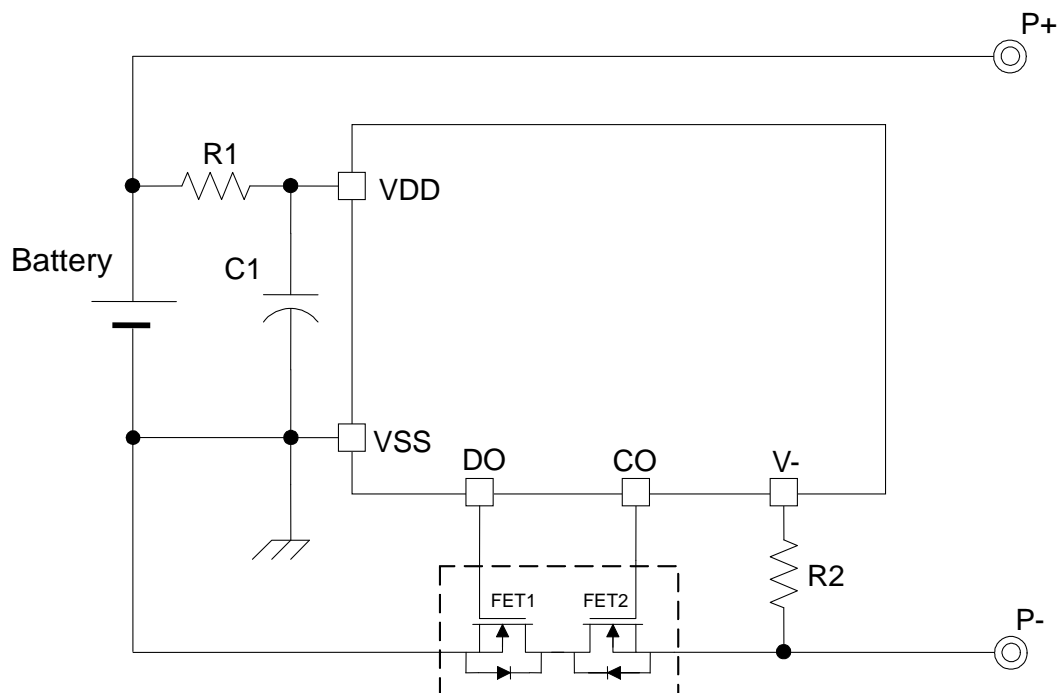

### Description

The NT1713 series are the 1-cell protection IC for lithium-ion/lithium-polymer rechargeable battery pack. The high accuracy voltage detector and delay time circuits are built in NT1713 series with state-of-the-art design and process.

To minimize power consumption, NT1713 series activate power down mode when an over-discharge event is detected for power-down mode enabled version. Besides, NT1713 series perform protection functions with four external components for miniaturized PCB.

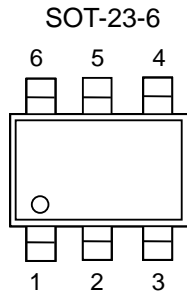

The tiny package is especially suitable for compact portable device, i.e. slim mobile phone and Bluetooth earphone.

### Typical Application Circuit

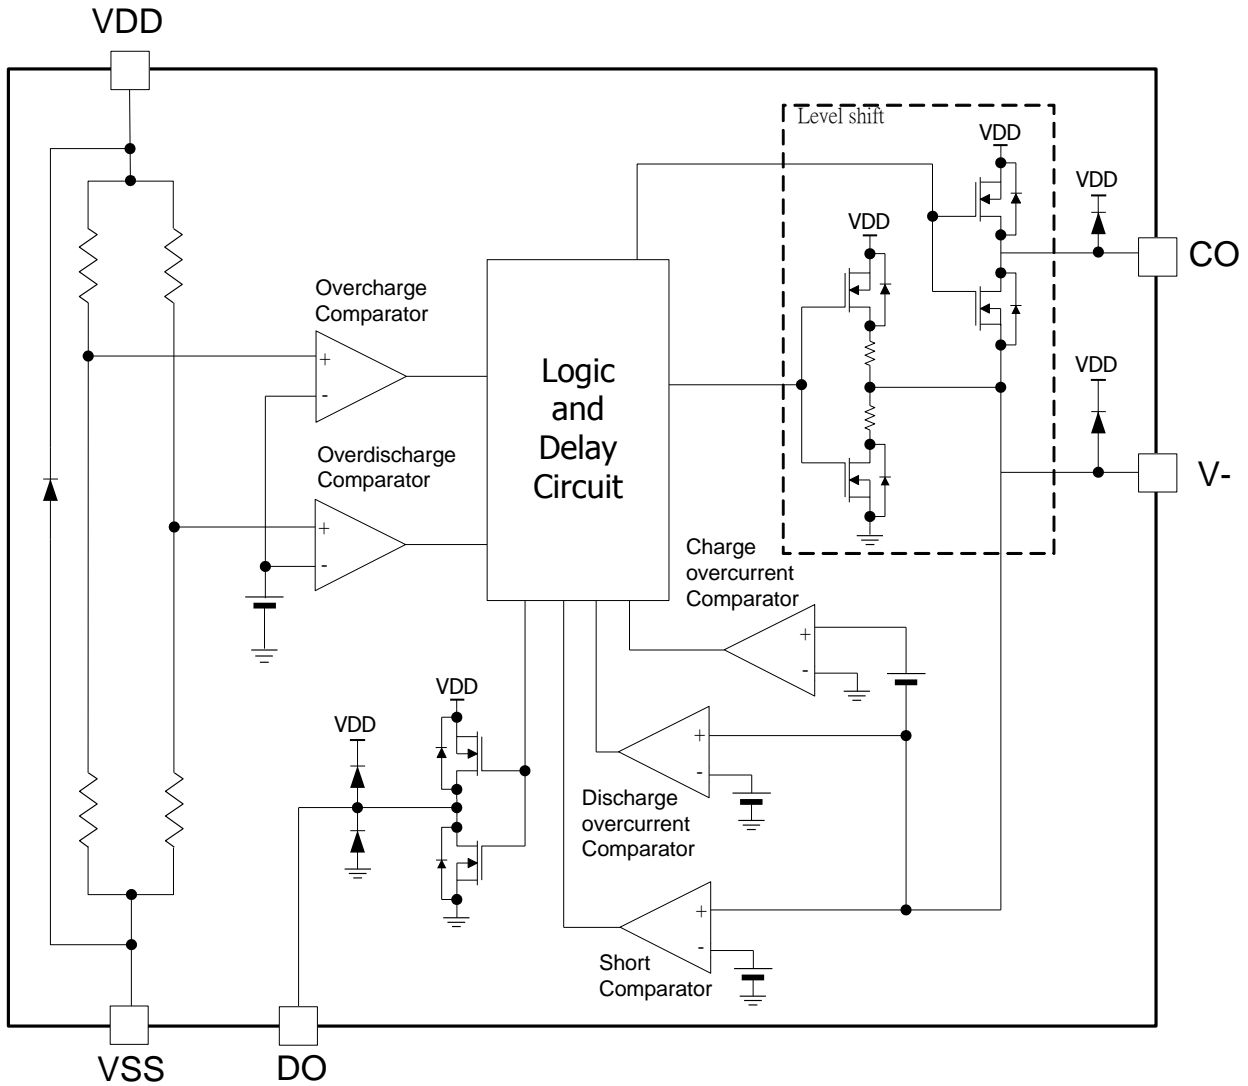

These devices have limited built-in ESD protection. The leads must be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## Package and Pin Description

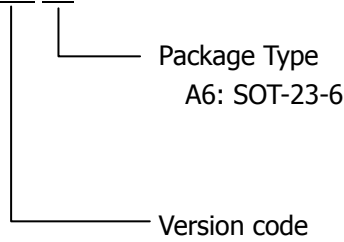

Pin No.	Symbol	Pin description
1	DO	Connection of discharge control FET gate
2	V-	Voltage detection between V- pin and VSS pin (Over-current / charger detection pin)
3	CO	Connection of charge control FET gate
4	NC	No connection
5	VDD	Connection for positive power supply input
6	VSS	Connection for negative power supply input
