

## **Single Output Hall Effect Latch**

### ❖ GENERAL DESCRIPTION

MA7021 is an integrated Hall effect latched sensor designed for electronic commutation of brush-less DC motor applications. The device is using HV BCD process includes an on-chip Hall voltage generator for magnetic sensing, a comparator that amplifies the Hall voltage, and a Schmitt trigger to provide switching hysteresis for noise rejection, and open-collector output. An internal band-gap regulator is used to provide temperature compensated supply voltage for internal circuits and allows a wide operating supply range.

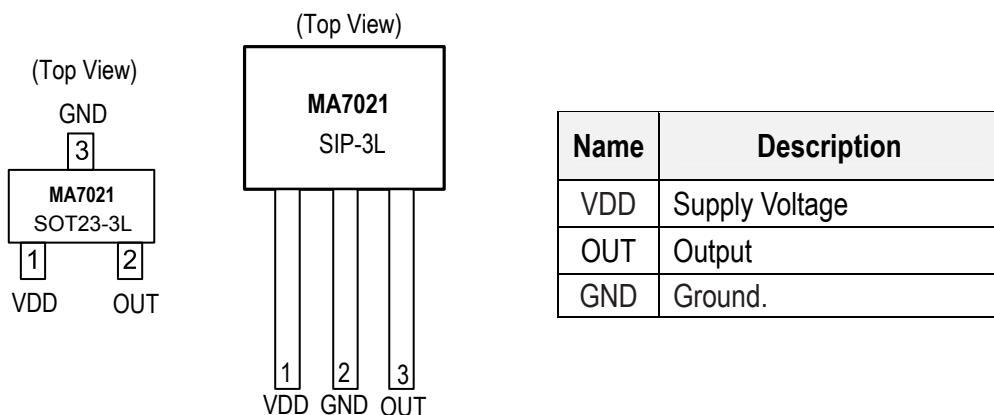

If a magnetic flux density larger than threshold  $B_{op}$ , OUT is turned on(low). The output state is held until a magnetic flux density reversal falls below  $B_{rp}$  causing OUT to be turned off (high).

### ❖ FEATURES
